Canada by researchers in the fields of ice physics and growth history in relation to its polycrystalline structure as well as ice  
parameters retrieval from remote sensing observations The volume describes processes operating at the macro and  
microscale e g brine entrapment in sea ice crystallographic texture of ice types brine drainage mechanisms etc The

obtained by leading experts during field experiments in the 1970s through the 1990s using photographic cameras and  
scanning microscopy In addition this volume presents techniques to retrieve a suite of sea ice parameters e g ice type  
concentration extent thickness surface temperature surface deformation etc from space borne and airborne sensor data The  
breadth of the material on this subject is designed to appeal to researchers and users of remote sensing data who want to

develop quick familiarity with the capabilities of this technology or detailed knowledge about major techniques for retrieval of key ice parameters Volume highlights include Detailed crystallographic classification of natural sea ice the key information from which information about ice growth conditions can be inferred Many examples are presented with material to support qualitative and quantitative interpretation of the data Methods developed for revealing microstructural characteristics of sea ice and performing forensic investigations Data sets on radiative properties and satellite observations of sea ice its snow cover and surrounding open water Methods of retrieval of ice surface features and geophysical parameters from remote sensing observations with a focus on critical issues such as the suitability of different sensors for different tasks and data synergism Sea Ice Physics and Remote Sensing is intended for a variety of sea ice audiences interested in different aspects of ice related to physics geophysics remote sensing operational monitoring mechanics and cryospheric sciences
