Practical Management of Thyroid Cancer Ernest L. Mazzaferri, Clive Harmer, Ujjal K. Mallick, Pat Kendall-Taylor, 2006-06-22. Cancer of the thyroid gland may be a less common condition than carcinoma of the breast, lung or colon, but it occurs with sufficient frequency to constitute a major problem that is of concern to general practitioners, physicians and particularly surgeons. Some idea of the frequency of thyroid carcinoma is given by its incidence in the United States. Every year some 26 000 patients are diagnosed there as suffering from thyroid cancer. Comparable figures apply to most countries in Europe, although the incidence does vary somewhat from country to country, perhaps depending on the endogenous iodine intake. Of the 21 000 patients diagnosed annually in the United States, two thirds will be women and some 800 will die of the disease during the year. This book should do much to improve the outcome in the treatment of thyroid cancer. First, because it is written by a small team of experts of international repute. Secondly, their wide experience of the condition allows them to write with authority, and thirdly, they express their views in clear and commendable English.
