

A BILLION DOLLAR

more. It's a multi-billion dollar industry. Any shark is taken regardless of age, size, or species.

MILLIONS OF ENCOUNTERS PER YEAR...

Each year around the world there are about 70 confirmed shark attacks, only 3 of which on average result in death. The numbers of attacks have risen over the past several decades, but not because sharks are more aggressive. Humans have simply taken to coastal waters in increasing numbers.

ANNUAL HUMAN DEATHS RESULTING FROM:

• Sharks	3
• Elephants/ Tigers	200
• Execution	2,400
• Illegal Drugs	22,000
• Road Accidents	1,200,000
• Starvation	8,000,000

"MAN EATER" IS A MISNOMER...

Sharks are known as eating machines. But because many species are cold blooded, some sharks eat only about 2 percent of their body weight each day. (That's a lot less than humans typically eat.) There is no record of a shark eating a person whole.

70-100 ATTACKS

5 FATALITIES

FACING EXTINCTION...

While sharks kill fewer than 15 people a year, their own numbers suffer greatly at human hands. Between 20 and 100 million sharks die each year due to fishing activity, according to data from the Florida Museum of Natural History's International Shark Attack File. The organization estimates that many shark populations have plummeted 30 to 50 percent.

THE BIGGER PICTURE: ECOLOGICAL IMPACT...

Sharks take anything from 7 to over 20 years to reach maturity, meaning that it takes populations a long time to recover; the current demand for their fins makes it impossible for their populations to fully return to previous levels. Sharks are top predators - when they are removed from the oceans, the entire eco-system suffers.

Respiration and metabolism of embryonic vertebrates Roger S. Seymour, 2012-12-06 The papers in this volume were presented at an international symposium held in South Australia on September 8-10 1983 The purpose of the meeting was to present the comparative physiology of gas exchange water balance and energetics of developing vertebrate embryos contributions were invited from leading research workers in an attempt to represent the forefront of investigation of all vertebrate classes and to promote a broadly comparative approach to the study of embryonic physiology These proceedings therefore reflect the current level of research activity focusing on each group of vertebrates While considerable expansion and specialization has occurred in the area of avian embryos over the last decade work on reptilian embryos is less developed and that on fish and amphibians is still in its infancy Although a great deal is known about respiration and metabolism in embryos of placental mammals the physiology associated with the curious mode of development of monotreme and marsupial embryos has not been examined until recently In this symposium the well studied vertebrate classes are represented primarily by specific research papers that document original work These are balanced by more extensive reviews of the lesser known classes
