

Igneous Rocks Cloze Activity

Read the passage below about igneous rocks and fill in the gaps using the words in the box.

magma	extrusive	igneous
intrusive	The Devil's Tower	granite

Devil's Tower, Wyoming, USA

There are three main types of rocks: sedimentary, igneous and metamorphic.

Igneous rocks are formed from _____ (or molten rock) when it cools down and solidifies. This can happen through volcanic activity or underground when the magma is still inside the Earth's crust. Igneous rocks that are made by volcanic eruptions are called _____ rocks. Those that are formed underground are known as intrusive rocks.

Extrusive rocks have different properties to intrusive rocks as the magma that they are made from cools down very quickly when it erupts from the volcano. This does not give crystals within the rock very long to form so these rocks usually have a very fine texture. _____ rocks cool more slowly and therefore contain larger crystals.

There are many different types of _____ rocks which are all made from different types of magma. The same type of magma can also form different kinds of rock depending on how quickly it cools. For example, _____ and rhyolite start off as identical types of magma but rhyolite is formed when the magma cools quickly and granite is formed when the magma cools more slowly.

Igneous rock can form interesting landmarks. _____, in the USA, is made from a type of igneous rock called phonolite porphyry.
