Illusion Of Separation Exploring The Cause Of Our Current Crises:

Illusion of Separation Giles Hutchins,2014-10-06 Our modern patterns of thinking and learning are all based on observing a world of things which we think of as separate building blocks This worldview allows us to count and measure objects without their having any innate value it provides neat definitions and a sense of control over life However this approach also sets humans apart from each other and from nature In reality in nature everything is connected in a fluid dynamic way Separateness is an illusion we have created and is fast becoming a dangerous delusion infecting how we relate to business politics and other key areas of our daily reality Giles Hutchins argues that the source of our current social economic and environmental issues springs from the misguided way we see and construct our world With its roots in ancient wisdom this insightful book sets out an accessible easy to follow exploration of the causes of our current crises offering ways to rectify these issues at source and then pointing to a way ahead

The Origin of Life Patterns Alan

Rayner,2017-03-30 Understanding the relationship between human cultural psychology and the evolutionary ecology of living systems is currently limited by abstract perceptions of space and boundaries as sources of definitive discontinuity This Brief explores the new understandings possible when space and boundaries are perceived instead as sources of receptive continuity and dynamic distinction between local identities and phenomena It aims to identify the recurrent patterns in which life is expressed over diverse scales in natural ecosystems and to explore how a new awareness of their evolutionary origin in the natural inclusion of space in flux can be related to human cultural psychology It explains why these patterns cannot adequately be represented or understood in terms of conventional logic and language that definitively isolates the material content from the spatial context of natural systems Correspondingly the Brief discusses how the perception of natural space as an infinite intangible receptive presence and of natural informational boundaries as continuous energetic flux revolutionizes our understanding of evolutionary processes The mutual natural inclusion of receptive space and informative flux in all distinguishable local phenomena enables evolutionary diversification to be understood as a fluid dynamic exploration of renewing possibility not an eliminative survival of the fittest Self identity is recognized to be a dynamic inclusion of natural neighborhood not a definitive exception from neighborhood The Origins of Life Patterns will be of interest to psychologists philosophers anthropologists evolutionary biologists ecologists mathematicians and physicists

peaceful life and society Management and the Sustainability Paradox David Wasieleski, Sandra Waddock, Paul Shrivastava, 2020-07-12 Management and the Sustainability Paradox is about how humans became disconnected from their ecological environment throughout evolutionary history Beginning with the premise that people have competing innate natural drives linked to survival Survival can be thought of in the context of long term genetic propagation of a species but at the same time it involves overcoming of immediate adversities Due to a diverse set of survival challenges facing our ancestors natural selection often favored short term solutions which by consequence muted the motivations associated with longer range sustainability values Managerial decisions and choices mostly adopt a moral calculus of costs versus benefits Managers invoke economic and corporate growth to justify virtually any action It is this moral calculus underlying corporate behavior that needs critical examination and reformation At the heart of it lie deep moral questions that we examine in this book with the goal of proposing ethical solutions to the paradox Management and the Sustainability Paradox examines the issue that there appears to be an inherent paradox between what some businesses view as a need for progress and a concern for sustainability In business we often see a collision between ideas of progress and sustainability which shapes corporate actions and managerial decisions Typical corporate views of progress involve the creation of wealth jobs innovative products and social philanthropic projects On the basis of these progressive actions they justify their inequitable distribution of surpluses by paying low wages and exploiting ecological resources It is not difficult to see the antagonistic interplay between technological and social innovation with our values for social and environmental well being and a dualism that needs to be overcome This book is intended for a broad appeal to an academic and policy maker audience in the sustainability and management fields The book will be of vital reading for managers seeking to reconnect our human chain with the natural environment in the cause of sustainable business Innovation in Environmental Leadership Benjamin W.
