

Enzymes and Cellular Regulation

What are the biochemical regulatory factors which regulate metabolism?

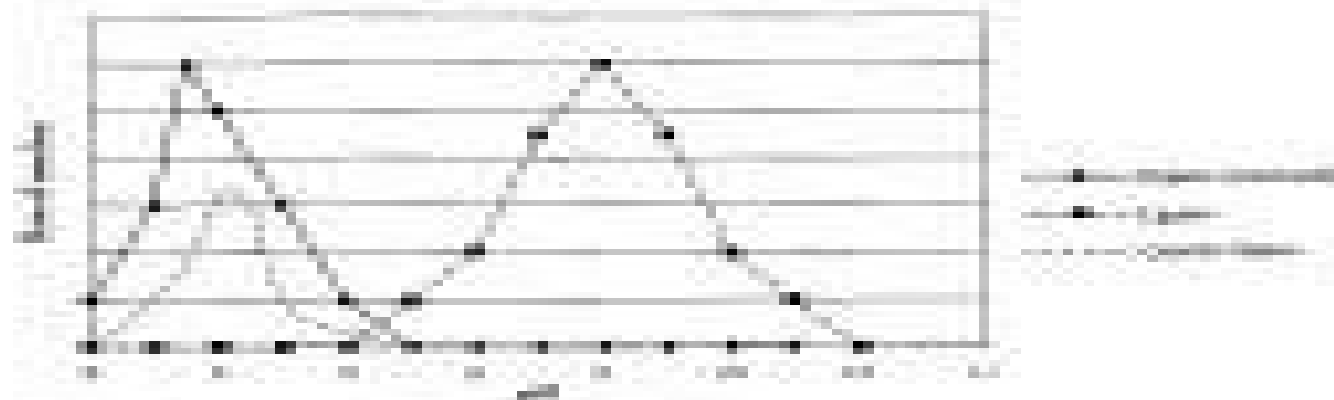

What?

Digestive enzymes are protein based biological catalysts that play a significant role in life. They help various substances react with each other, such as converting the food into glucose. They are also different from other catalysts because they are made up of amino acids. They are made up of amino acids, which are linked to form long chains. These long chains form a specific structure or shape which is called an enzyme. In this section, we will look at the general structure for two different enzymes. The digestive enzyme, pepsin, is found in the stomach and breaks down food in the small intestine. While pepsin breakdown occurs in the stomach.
