Achievement Levels and Achievement Level Descriptors

With the implementation of the Georgia Milestones Assessment System, Georgia educators have developed four achievement levels to describe student mastery and command of the knowledge and skills outlined in Georgia's content standards. Most students have at least some knowledge of the content described in the content standards; however, achievement levels succinctly describe how much mastery a student has. Achievement levels give meaning and context to scale scores by describing the knowledge and skills students must demonstrate to achieve each level.

The four achievement levels on Georgia Milestones are *Beginning Learner*, *Developing Learner*, *Proficient Learner*, and *Distinguished Learner*. The general meaning of each of the four levels is provided below:

Beginning Learners do not yet demonstrate proficiency in the knowledge and skills necessary at this grade level/course of learning, as specified in Georgia's content standards. The students need substantial academic support to be prepared for the next grade level or course and to be on track for college and career readiness.

Developing Learners demonstrate partial proficiency in the knowledge and skills necessary at this grade level/course of learning, as specified in Georgia's content standards. The students need additional academic support to ensure success in the next grade level or course and to be on track for college and career readiness.

Proficient Learners demonstrate proficiency in the knowledge and skills necessary at this grade level/course of learning, as specified in Georgia's content standards. The students are prepared for the next grade level or course and are on track for college and career readiness.

Distinguished Learners demonstrate advanced proficiency in the knowledge and skills necessary at this grade level/course of learning, as specified in Georgia's content standards. The students are well prepared for the next grade level or course and are well prepared for college and career readiness.

More detailed and content-specific concepts and skills are provided for each grade, content area, and course in the **Achievement Level Descriptors (ALDs)**. ALDs are narrative descriptions of the knowledge and skills expected at each of the four achievement levels and were developed for each grade level, content area, and course by committees of Georgia educators in March 2015 and July 2015. The ALDs are based on the state-adopted content standards.

Fish Pheromones and Related Cues P. W. Sorensen, Brian D. Wisenden, 2015-03-16 Pheromones are chemical cues that pass between members of the same species that convey specific adaptive information These cues and related chemicals whose function are less well defined are especially important to fishes because of their aquatic environments and complex behaviors Pheromones are also of increasing interest in both basic and applied aspects of fish biology because they can be used to manipulate fish behavior and may explain phenomena such as fishery collapse *Fish Pheromones and Related Cues* provides a timely synthesis of this growing body of research in freshwater and marine species and explores everything from how these chemical signals evolved are produced released and then processed and finally to potential applications in fish culture and conservation *Fish Pheromones and Related Cues* opens with a useful overview on the theory of chemical communication and definitions Chapters then progress by examining the biological importance of pheromones in inter and intra species communication the role these chemical cues play in a variety biological functions from reproduction to predation and then how they evolved and are detected and recognized by fish nervous systems Final chapters provide valuable insight into how pheromones can be measured how pheromonal disruption can explain effects of environmental pollution and lastly how they pheromones are being applied in real world efforts to

culture fish species and to conserve our wild populations and control invasive species With far reaching economic evolutionary and ecological implications Fish Pheromones and Related Cues will be an essential volume for anyone working in the fields of chemical communication fish biology fisheries science aquatic conservation ecology invasive species control and aquaculture
