FLASHWAVE® 9500 Packet Optical Networking Platform

As the communications world transforms, demand for bandwidth and high-quality services is escalating. Residential and business customers have rising expectations and are more selective.

This shift in expectations challenges service providers to migrate to a packet optical infrastructure, enabling diverse, bandwidth-intensive services. Operators must also maintain existing revenue-bearing services efficiently, as the transition to packet optical networking takes shape. The underlying network architecture must therefore be highly reliable, manageable, and scalable to keep the lifetime cost below the revenue curve. The FLASHWAVE 9500 platform addresses these challenges using an innovative packet optical design.

Modular and Flexible

The FLASHWAVE 9500 Packet ONP delivers ROADM, OTN, Ethernet and TDM technologies for deploying optical ring, mesh, and linear add/drop topologies with 99.999% service availability. All plug-in cards, fans and chassis power distribution are designed for resilient operation with no single point of failure. The modular architecture enables carriers to select configurations for specific applications, whether ROADM-only, aggregation-only, or combinations of service aggregation and WDM on a single network element. The FLASHWAVE 9500 system reduces footprint, capital/operational expenses, and complexity by collapsing multiple technologies and network layers into a single, easy-to-use, modular platform.

Two Chassis Options

Two chassis options are available: the HDS for 23-inch racks and the SDS for 19-inch racks, where each model can be expanded to multiple chassis sharing the same node ID. This offers a highly modular and scalable system for packet optical networking. The internal packet and TDM switch capability maximizes service delivery efficiency through dedicated centralized packet, OTN and TDM switch fabrics.

The centralized fully redundant switch fabric provides any-to-any switching capability and aggregation for any service to any port on the platform. The switch fabric offers dedicated 100% OTN, along with 100% packet, 100% SONET/SDH operation, and the ability for interworking. This architecture minimizes stranded port capacity, allowing efficient modular scaling for interconnection between the FLASHWAVE 9500 platform and expensive core router interfaces. As a result, the number of ports needed for a given application is significantly reduced, lowering capex and minimizing first capital cost, while protecting the equipment investment.
