Encyclopedia of Science and Technology Communication Susanna Hornig Priest, 2010-07-14 In the academic world the term science communication refers both to a set of professions such as science journalism and public information work and to an interdisciplinary scholarly research specialization Much of this research is aimed at improving our understanding of the best ways to communicate complex information especially to people who are not scientists Science communication specialists are concerned with giving people useful information about health environment and technology as well as science itself In order to do this we also need to improve our understanding of how people think form opinions and process information Additionally professional practitioners in science communication are engaged in strategic and ethical decisions every day such as How should reporters cover the issue of climate change Should the views of scientists who do not believe that climate change has been caused by human activity be included alongside the views of those who do in order to give a balanced story or does this mislead the public into thinking that both of these positions are equally accepted within the scientific community The Encyclopedia of Science and Technology Communication provides information on the entire range of interrelated issues in this interdisciplinary field in one place along with clear suggestions on where to begin the search for more Geared towards undergraduate and graduate students in journalism communication mass communication and media studies as well as towards working journalists public information officers and public relations specialists this encyclopedia introduces this vast fascinating field while challenging

Communication about Genetics Clara L. Gaff,Carma L. Bylund,2010 Genetics is in all senses a family affair The diagnosis of a genetic condition affects not only the patient and biological family members who may themselves be at risk but also family more generally as support may be sought from those considered kin and who may or may not be at risk themselves It is considered best practice in genetic consultations to explore who will be informed within the family when a genetic condition or risk is diagnosed particularly when the health of other family members is at risk There is little guidance or consensus on how to achieve the implicit goal of informed family members while respecting patient confidentiality however There is a need for practitioners to be aware of the dynamics of family communication and to have guidance about how they may sensitively facilitate communication about genetics within families This handbook facilitates the development of clinical practices relating to family communication about genetics Relevant theories of family communication are summarized and related to a clinical genetics milieu and from this frameworks for practitioners are presented A book of this nature is particularly timely as the completion of the Human Genome Project will result in an unprecedented amount of information about genetic constitution and health risks becoming available to individuals and their families The presence of a potentially genetic condition in a family is not a new phenomenon However the growth in testing for genetic conditions common complex conditions and variants that may influence health as well as drug metabolism means that a greater number of individuals will face decisions about communicating this information to their relatives Many health professionals in all levels of health care will be confronted with issues of responsibility and practice in family communication about genetic information as they become providers of this testing Designing Babies Robert Klitzman,2019-09-09 Since the first test tube baby was born over 40 years ago In Vitro Fertilization and other Assisted Reproductive Technologies ARTs have advanced in extraordinary ways producing millions of babies An estimated 20% of American couples use infertility services to help them conceive and that number is growing Such technologies permit thousands of people including gay and lesbian couples and single parents to have offspring Couples can now transmit or avoid passing on certain genes to their children including those for chronic disease and probably sometime soon height and eye color as well Prospective parents routinely choose even the sex of their future child and whether or not to have twins The possibilities of this rapidly developing technology are astounding especially in the United States where the procedures are practically unregulated and a large commercial market

for buying and selling human eggs is swiftly growing New gene editing technology known as CRISPR allows for even more direct manipulation of embryos genes As these possibilities are increasingly realized potential parents doctors and policy makers face complex and critical questions about the use or possible misuse of ARTs Designing Babies confronts these questions examining the ethical social and policy concerns surrounding reproductive technology Based on in depth interviews with providers and patients Robert Klitzman explores how individuals and couples are facing quandaries of whether when and how to use ARTs He articulates the full range of these crucial issues from the economic pressures patients face to the moral and social challenges they encounter as they make decisions which will profoundly shape the life of their offspring In doing so he reveals the broader social and biological implications of controlling genetics ultimately arguing for closer regulation of procedures which affect the lives of generations to come and the future of our species as a whole
