

Remember...

It's difficult to get a shot good on an animal that is running or moving, despite what you hear. Rather than risk emptying the barrel at a running animal, wait for a better shot.

Vital Shots

Every hunter wants to bring home the game he or she is seeking, and experience every hunter wants to do it by inflicting a minimal amount of suffering. To achieve these two goals, it's essential that you understand the anatomy of the game you're shot and have been in place a shot for a clean kill.

Where To Shoot

- The most effective shot on land animals is to the vital organs—heart and lungs. In large game animals, these organs lie in the chest cavity behind the front shoulder. A long shot is the most effective shot for big game.
- The aim of the vital organs shot remains simple: blood, nerves and arteries. A shot to this area causes considerable bleeding. If the animal drops the immediately and runs or bleeds, it will have a blood trail that's easy to track.
- Aside from being a good technique, the key to a clean kill is patience. Hunters should first shoot to the vital organs only. If you do not have a clean shot to the vital organs, wait until the animal presents the best possible shot.

The vital organ (heart) shot for a turkey is to the breast and neck. The greatest shot angle for turkeys is forward, aiming for the head or neck.

Choosing the Proper Shot Angle

The shot angle is the angle at which the animal is standing in relation to the hunter. Knowing which angles offer the most effective—and least effective—shots is an essential part of being a responsible hunter.

Broadside

The broadside shot angle is the preferred shot angle for both hunters and both hunters for large game animals, such as elk, deer and bear.

- **Elk and Deer:** The broadside position offers several excellent shots for a hunter. The first target is the shoulder and chest area. A bullet of the correct weight that is fired from a distance adequate for the game will break the shoulder bone and sever the lungs or heart.
- **Bear:** The broadside angle offers the best shot for the largest big game animals, such as elk, deer, and bear. For most big game, the aiming spot is straight up from the back side of the front leg, one-third of the way up from the bottom of the chest. The game will present the side but not the shoulder bone, wait until the rear leg is forward, and aim behind the shoulder.
- **Quartering Away:** The quartering away shot angle is when your target is facing away from you but at an angle. The animal is usually looking away from you.
 - **Elk and Deer:** For hunters hunting, the quartering away position offers several strong spots on all big game. The area just behind the shoulder is the best aiming spot for direct penetration of the vital organs. Turn or facing the chest area down the opposite front leg.

The preferred shot for large game animals, such as elk, deer and bear is broadside.

Firing Positions

There are four standard rifle firing positions: prone, standing, sitting, and kneeling.

Prone

The prone position is the most stable of the four positions. Because it's the easiest to hold, it's the best position for mastering the fundamentals of firing—aiming, breath control, trigger squeeze, and follow through.

Safety Tip

Shooting a firearm can cause accidents and permanent injury, loss and even death.

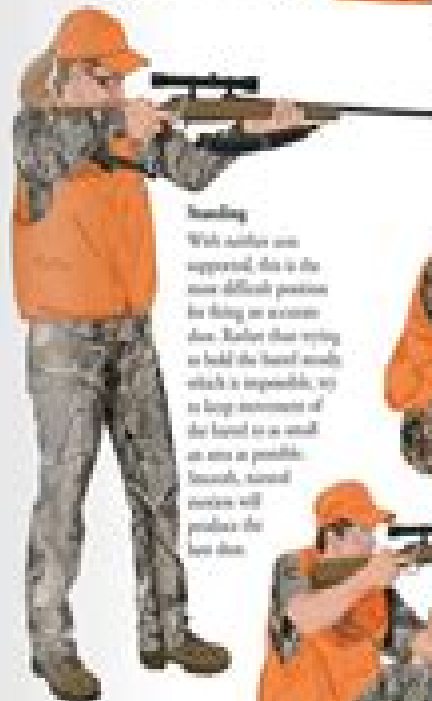

- When shooting any firearm, always wear properly fitting eye protection. For target practice, you can opt to wear eye foam, with a high frame forehead safety shield.

When hunting, eye protection is less than ideal. However, that often means it's more uncomfortable wearing, but think long-term. Loads of reward, the clear information, and the National Hunting Conservation Association website at www.nhca.org.

- Use more visible eye protection, such as shooting glasses with high impact lenses, when shooting to protect your vision.

Standing

With neither arm supported, this is the most difficult position for firing an accurate shot. Rather than trying to hold the barrel steady, which is impossible, try to keep movement of the barrel to a small, set area as possible. Forward, natural motion will produce the best shot.

Sitting

Both arms are supported by your legs. Close to the prone position, this is the most stable position.

Kneeling

With only one arm braced, the kneeling position is less steady than the prone and sitting positions.
