

PREPARING YOUR BALER FOR WORK

HITCHING BALER TO TRACTOR - Continued

1 - Center bearing support.

Illust. 6
440 Baler hitched to the tractor for transporting.
430 Baler is similar.
(Three-joint universal drive shaft).

In order to place the baler more nearly behind the tractor for transporting between fields, the hitch can be shifted to the transport position as shown in Illusts. 6 and 6A.

To shift the hitch from one position to the other, pull the hitch latch rope "3" (Illust. 5A) to release the latch and then by backing the tractor in the proper direction the hitch will swing to the alternate position. In some cases it may be necessary to block the right wheel for this to be accomplished.

Caution! When operating the power take-off, be sure that the master shield covering the power take-off shaft is always in place.

A-74223C

Illust. 6A
430 Baler hitched to tractor for transporting.
(Two-joint universal drive shaft).

430 Baler with two-joint universal drive shaft: When transporting the baler, always disconnect the power take-off shaft as shown in Illust. 6A and connect the shaft to the hitch pin assembly, using a 3/16-inch quick-attachable cotter pin. This must be done to protect the drive shaft from damage by turning too short.

PROTECTIVE DEVICES ON YOUR BALER

Your baler is equipped with safety devices to protect it from damage resulting from obstruction or overload. Acquaint yourself with these devices before operating your baler.

Shear Bolts

Illust. 6B
Shear bolts must have this marking to be the correct hardness.

The shear bolt (Illust. 6B) used in the flywheel wheel, needle, and packer fingers is a 5/16NF x 2-inch hex. head cap screw (type 5) with lock washer, and nut, available at your International Harvester dealer. Regular bolts (type 1) are too soft and shear too easily. Special bolts (type 8) are too hard and won't shear easily enough to prevent damage to the machine.

When replacing the shear bolts, always draw them up to a snug fit.

FLYWHEEL

The purpose of the flywheel shear bolt (Illust. 7) is to protect the baler against damage from stone or other foreign materials picked up accidentally with the hay.

The shear bolt makes a loud noise when it shears. This is your warning to stop the tractor and the baler immediately and determine the cause of the shearing. See the "Trouble Finding Chart" on pages 56 and 57 for possible causes. When the cause of shearing has been determined and eliminated, replace the shear bolt as follows:
