

FROZEN FOOD STORAGE COMPARTMENT

The frozen food storage compartment has a set volume of 3.7 litres (10.13 cubic feet) and has a two-star classification (2★). This means that, provided the electric thermostat or gas control is set as described under "Temperature Regulation", the frozen food storage compartment will be maintained at a temperature of -12°C (10°F), or below. Under these conditions, most types of frozen food can be stored in the compartment for up to one month.

When storing frozen food, do not set the gas control at too low a setting. Reduce it only if foodstuffs in the fresh food compartment become too cold.

The permissible length of storage time cannot be precisely stated as this varies very much with the nature of the packaged quick-frozen food stored — vegetables, fish, meat, fruit and dairy products. It is therefore best to take note of the food manufacturer's estimate of the permissible storage times of his products. This estimate, which should be marked on each frozen food package, takes into account inevitable variations during every-day operation which may lead to changes in taste and colour.

If frozen food is allowed to thaw, i.e. the packs become wet and limp, no attempt should be made to store or re-freeze — it should be consumed within 24 hours.

The frozen food storage compartment is for storing quick frozen foods, ice-cream and making ice. It is not intended for the quick-freezing of foodstuffs.

Care should be taken when handling and consuming water ices (e.g. iced lollies) taken directly from the frozen food storage compartment because of the possibility of cold burn (frost bite) when such ices are at very low temperatures.

Never put bottles or cans of carbonated (gassy) drinks in the frozen food storage compartment as they may burst if the gas is forced out by freezing.

STORING FOOD IN THE REFRIGERATOR

To prevent drying out and the transfer of flavours from one food to another, always store foods in covered containers or plastic bags, or wrap them in waxed paper.

Tall bottles can be placed in the lower door shelf by moving the upper door shelf to its storage position at the top of the door. The plastic tray can be removed from the upper cabinet shelf to make room for bottles and other tall items in the cabinet.

Do not leave the refrigerator door open longer than necessary.

NEVER PUT HOT FOOD IN THE REFRIGERATOR

Whenever possible, it is of advantage to pre-cool your refrigerator with its contents by running it on bottled gas or mains electricity for a few hours, or overnight, before starting out from home.

To prevent undue movement of bottles etc. in the refrigerator when — on the move — crumpled pieces of clean paper may be wedged temporarily between the various items.

TWO-POSITION TRAVEL CATCH

The travel catch at the top of the door has two alternative positions. The first (Fig. 3a) holds the door tightly closed and should be used when travelling. The second position (Fig. 3b) keeps the door slightly open and is intended to be engaged when the refrigerator is out of use so that air can circulate inside.

ICE-MAKING

Fill the ice-tray with water to within 5mm from the top, and place it on the shelf in the top of the frozen food storage compartment. When ice has formed, the tray can be released from the shelf simply by lifting one corner.

Ice will be made more quickly if the gas control or electric thermostat knob (except on 12V) is turned to 'MAX'. Remember to return the knob to its normal setting when ice has formed otherwise food in the cabinet may become too cold.

DEFROSTING

Frost will gradually form on and in the frozen food storage compartment and on the fins at the side of the compartment. It is a mistake to assume that an accumulation of frost gives a colder cabinet therefore the refrigerator should be defrosted regularly — about once a week or ten days, depending on the conditions of use.

To defrost, turn the gas control knob (5) to OFF, or the voltage selector switch (6) to "0", depending on which operates it being used. Remove the ice-tray, food, etc.; wrap frozen foods in several layers of clean newspaper and place the package in a cool place.

To defrost as quickly as possible, a small dish of hot (not boiling) water may be placed on the ice-tray shelf, and a bowl of hot water on a cabinet shelf, changing the hot water as necessary until all frost has melted.

Do not place dishes of hot water on the bottom of the frozen food storage compartment, and do not attempt to defrost more quickly with an electric fire or other form of heat as this may damage the plastic surfaces.

Defrost water will run via a tube at the back into the drip collector fixed to the rear of the refrigerator, where it will evaporate into the circulating air.

When all the frost has melted, wipe dry the frozen food storage compartment and cabinet interior, then re-start the refrigerator, setting the gas control knob or voltage selector switch and thermostat knob to their respective positions.

Replace the fresh and frozen food, but wait until the cabinet has cooled down again before making ice.

Remember that if the temperature of frozen food is allowed to rise unduly during defrosting, its storage life may be shortened.

CLEANING THE REFRIGERATOR

Clean the refrigerator thoroughly at intervals as necessary. Turn off the gas or disconnect from the electricity supply, depending on which is being used, empty the cabinet and defrost as described earlier.

The refrigerator and its accessories may then be cleaned with a soft cloth wrung out in a weak solution of bicarbonate of soda. Finally, wipe over with a cloth wrung out in warm water only and dry with a clean cloth. Do not wash any plastic parts in water that is more than hand hot and do not expose them to dry heat.

NEVER USE STRONG CHEMICALS OR ABRASIVE CLEANING MATERIALS ON ANY PART OF THE REFRIGERATOR.

Replace the accessories and restart the refrigerator.

WHEN NOT IN USE

Whenever your refrigerator is to be out of use for a period, turn off the gas, or disconnect from the electricity supply, as applicable. Empty the cabinet and defrost as described earlier. Clean and thoroughly dry the interior and accessories and leave the door slightly open by engaging the alternative position of the travel catch (Fig. 3b). If this is not done, the air inside may go stale giving rise to an unpleasant odour which could be difficult to remove at a later date. Empty and dry the ice-tray.

CONSUMPTION

It is not possible to give precise consumption figures for mains voltage electricity, as these vary depending on individual conditions of use. The figures in the following table may, however, be taken as a guide.

ELECTRICITY (220/240V)	ROOM TEMPERATURE		
	20°C (68°F)	25°C (77°F)	MAX
kWh (units) per 24 hours	1.7	2.0	2.28

BOTTLED GAS	GAS CONTROL SETTING		
	MIN	MID	MAX
lb liquid/24 hours	0.42	0.53	0.79
kg per 24 hours	0.19	0.24	0.36

MAINTENANCE

CHECKING FOR GAS LEAKS

Periodically, and after service adjustments to the gas equipment, all connections should be checked for leaks by applying a soap/water solution (with the burner alight) and watching for bubbles. **DO NOT USE A FLAME TO CHECK FOR LEAKS.** Screw connections should be tight but not overtight. (To check at the back of the refrigerator it will be necessary to make a temporary connection with flexible tubing).

FLUE BAFFLE

The flue baffle must be in position in the central tube of the boiler, over the burner, suspended on its support wire so that the lower edge of the baffle is 75 mm (3 inches) above the bottom of the tube. If the baffle is missing or incorrectly located, the cooling unit will not operate properly on bottled gas.

CLEANING FLUE, BURNER, AND JET (see Fig. 4)

The appearance of the burner flame should be checked at least once a year. To do this, turn the gas control knob to MAX, when the colour of the flame should be predominantly blue. If this is not the case, the refrigerator should be emptied, disconnected, and removed from the recess, and the flue, burner and jet cleaned as described below. (The outer cover of the flue outlet will have to be removed and the flue extension tube withdrawn from the outside before the refrigerator can be moved). When the refrigerator is out of the recess, proceed as follows:

1. Remove the "lady T" flue top, then, from top of central flue tube of boiler, lift out the flue baffle on its support wire.
2. With door travel catch engaged, lay cabinet on left-hand side (i.e. burner near the floor) on sheets of newspaper.
3. Disconnect gas pipe from burner by undoing union (8), then pull out burner jet (9). Clean jet by washing it in White Spirit or alcohol, then blowing through with air. Do not under any circumstances prick out the jet. The orifice in the jet has been carefully designed. It is very delicate and any damage to the orifice could affect safety and performance.
4. Remove screw holding burner bracket (11) to boiler, release bracket tongues from slot in boiler, then carefully move burner bracket assembly to one side, clear of the flue tube.
5. Clean burner and adjacent components of soot etc. without disturbing their relative positions.
6. Clean flue tube of boiler — a special flue brush (part no. 151404) is available as an extra for this purpose.
7. Reassemble equipment, engaging tongues in top of burner bracket (11) in corresponding slot in bottom of boiler before replacing fixing screws. Gas unions must be tight but not overtightened.
8. Operate button (4) of igniter whilst watching to check that spark jumps from electrode to burner heads. (See next section).
9. Referring to item "Checking for Gas Leaks", re-start refrigerator, light burner and leave on test to ensure that it operates properly.
