

Periodic Table Basics

Step 1: Complete the square for each element by filling in the atomic number, name, & atomic mass.

Step 2: Determine the number of protons, neutrons, and electrons in an atom of each element.

Step 3: Identify if the element is a solid, liquid, or gas at room temperature.

Step 4: Give the melting (M.P.) and boiling points (B.P.) in degrees Celsius.

Step 5: List at least three physical or chemical properties for each element.

Step 6: List at least three uses for each element.

Step 7: Draw a Bohr diagram and Lewis Structure to show the arrangement of electrons and the number of valence electrons.

Step 8: Use the following colors to shade in the square for each element. You should **ONLY** color the small square in the upper left-hand corner and not the entire card.

Green = Li & Na
Orange = B & Al

Pink = O & S
Red = C & Si

Blue = Be & Mg
Tan = N & P

Purple = F & Cl
Yellow = He, Ne, & Ar

Step 9: Cut the cards apart and arrange according to atomic number in the pattern shown. Once you have the cards arranged in the correct order, glue them to a large sheet of construction paper.

Elements of Chemistry, 1983 **Handbook of the Physicochemical Properties of the Elements** Gregory V. Samsonov, 2012-12-06

The American edition of this handbook contains concise information on the basic physical properties of the elements and on their chemical characteristics In general the data selected for inclusion in the handbook are those which either agree well with calculated data in those cases where calculations could be carried out or satisfy various correlations particularly those based on concepts of the distribution of valence electrons of isolated atoms in the formation of a condensed state as electrons localized at atomic ions in the form of energetically stable configurations and as nonlocalized electrons The Russian edition was published in the USSR in 1965 and new or previously omitted data have been added to all the sections of the present edition In addition the authors have considered it necessary to include a series of new sections Thus a new table has been included Electronic Configurations and Ground States of Free Atoms and Their Ions since in the ionization of some atoms particularly for transition metals the electrons are not always abstracted from the outer shell and consequently calculation of the ground state electron energy level using the usual vector model does not give a direct result The ground states are obtained experimentally and the table contains the corresponding data on the configurations and states of triply ionized atoms which is usually sufficient
