

Experimental and theoretical investigation of the mechanical behavior of polypropylene

Experimental and theoretical investigation of the mechanical behavior of polypropylene. The study focuses on the mechanical properties of polypropylene under various loading conditions. The experimental results show that polypropylene exhibits a high degree of ductility and toughness, with a yield strength of approximately 30 MPa and a tensile strength of approximately 40 MPa. The theoretical analysis, based on the von Mises yield criterion, predicts a yield strength of approximately 35 MPa, which is in good agreement with the experimental results. The study also investigates the effect of temperature and strain rate on the mechanical behavior of polypropylene, showing that the yield strength decreases with increasing temperature and increasing strain rate.
