Ethernet Networking for the Small Office and Professional Home Office Jan L. Harrington, 2010-07-28 In a local area network LAN or intranet there are many pieces of hardware trying to gain access to the network transmission media at the same time i e phone lines coax wireless etc However a network cable or wireless transmission frequency can physically only allow one node to use it at a given time Therefore there must be some way to regulate which node has control of the medium a media access control or MAC protocol Ethernet is a MAC protocol it is one way to regulate physical access to network transmission media Ethernet networking is used primarily by networks that are contained within a single physical location If you need to design install and manage a network in such an environment i e home or small business office then Ethernet Networking for the Small Office and Professional Home Office will give you an in depth understanding of the technology involved in an Ethernet network One of the major goals of this book is to demystify the jargon of networks so that the reader gains a working familiarity with common networking terminology and acronyms In addition this book explains not only how to choose and configure network

hardware but also provides practical information about the types of network devices and software needed to make it all work. Tips and direction on how to manage an Ethernet network are also provided. This book therefore goes beyond the hardware aspects of Ethernet to look at the entire network from bottom to top along with enough technical detail to enable the reader to make intelligent choices about what types of transmission media are used and the way in which the various parts of the network are interconnected. Explains how the Ethernet works with emphasis on current technologies and emerging trends in gigabit and fast Ethernet. WiFi routers and security issues. Teaches how to design and select complementary components of Ethernet networks with a focus on home and small business applications. Discusses the various types of cables, software, and hardware involved in constructing, connecting, operating, and monitoring Ethernet networks. *Cisco CCENT/CCNA ICND1 100-101 Official Cert Guide, Academic Edition* Wendell Odom, 2013.
