Tutoriales en Tomografía Abel Eduardo Parra, 2023-10-10 En *Tutoriales en Tomografía* entre la teoría y la práctica el autor presenta un contenido riguroso y práctico creado por y para los productores de bioimágenes y médicos en formación en la especialidad de imágenes. Un aspecto innovador en este libro es que sus contenidos se focalizan en las tareas inherentes al trabajo cotidiano de los técnicos y licenciados en bioimágenes. El libro aborda de manera exhaustiva temas fundamentales en la TC: la administración de contraste e inyección, los protocolos de examen con su planificación y elección de parámetros de adquisición, así como la distribución y gestión de los recursos en una sala de TC. Además, encontrará secciones dedicadas a la anatomía, información dosimétrica y los principios de formación de imágenes y postprocesos. Sistemática en Estudios de TC Eduardo Parra, 2024-10-14 En *Sistemática en estudios de TC* el autor aporta una versión abreviada pero fundamental que se desprende de su primera obra *Tutoriales en Tomografía*. Si bien ambos libros poseen formato digital, *Sistemática en estudios de TC* tiene el objetivo de facilitar el acceso a versiones impresas. Cada capítulo está acompañado por numerosas figuras, fotografías, esquemas y cuadros explicativos cuidadosamente seleccionados para complementar y aclarar los conceptos presentados. La versión abreviada consta de 4 capítulos donde se presenta un contenido riguroso y práctico que se enfoca en las tareas del productor de bioimágenes. Los dos primeros capítulos presentan la información en un entorno gráfico similar a una interfase de un equipo de TC. Allí el lector encontrará en primer término cada parámetro técnico para las adquisiciones explicado como si fuera un manual de usuario de un tomógrafo de uso clínico. En segundo término los procesos de revisión de imágenes que incluyen las reconstrucciones multiplanares y loteo de imágenes, mediciones segmentación y reconstrucciones 3D.

Landmarking and Segmentation of 3D CT Images Shantanu Banik, Rangaraj Rangayyan, Graham Boag, 2022-06-01 Segmentation and landmarking of computed tomographic CT images of pediatric patients are important and useful in computer aided diagnosis CAD treatment planning and objective analysis of normal as well as pathological regions Identification and segmentation of organs and tissues in the presence of tumors are difficult Automatic segmentation of the primary tumor mass in

neuroblastoma could facilitate reproducible and objective analysis of the tumor's tissue composition shape and size. However, due to the heterogeneous tissue composition of the neuroblastic tumor ranging from low attenuation necrosis to high attenuation calcification, segmentation of the tumor mass is a challenging problem. In this context, methods are described in this book for identification and segmentation of several abdominal and thoracic landmarks to assist in the segmentation of neuroblastic tumors in pediatric CT images. Methods to identify and segment automatically the peripheral artifacts and tissues, the rib structure, the vertebral column, the spinal canal, the diaphragm, and the pelvic surface are described. Techniques are also presented to evaluate quantitatively the results of segmentation of the vertebral column, the spinal canal, the diaphragm, and the pelvic girdle by comparing with the results of independent manual segmentation performed by a radiologist. The use of the landmarks and removal of several tissues and organs are shown to assist in limiting the scope of the tumor segmentation process to the abdomen to lead to the reduction of the false positive error and to improve the result of segmentation of neuroblastic tumors.
