

Gender Differences

Gender Differences are differences that are created within males and females due to their biological and physical characteristics. Gender differences can be observed everywhere be it at schools, homes or at workplaces. Researchers claim that there isn't any vast difference in these genders but still both the genders are different from each other in various aspects for example in their way of thinking, reacting to situations, social behaviors and many other aspects.

It is thought about women that they are more social, are less confident, have low self esteem and tend to panic in chaotic situations where as men are thought to be as opposite who are more confident with high self esteem and more emotionally and physically stronger than women and look at situations with a more practical perspective. (Bland, 1) Some Basic Gender Differences Researchers believe that difference in physical characteristics tends to disappear soon but the psychological and biological differences remain to continue in them. • Biological and Physical Differences

Biological differences include the fact that girls tend to have more sensitive ears than boys have or they tend to develop negative thinking more quickly than boys do. Gender differences can be clearly observed at schools where girls tend to perform well in history, art and language classes where as boys perform faster in mathematics. From the very early age when a child starts to go to school people have observed that men tend to outperform females in math's class, this is not anything related to intelligence of either genders but this relates to the fact that boys have strong visual ability rather than hearing ability.

Boys perform better at the sports ground than girls due to their physical strength. Women are more caring towards other human beings and possess a soft corner but mostly males do not have this caring ability or this concern. (Think Again: Men and Women Share Cognitive Skills, 1) • Communication Differences When it comes to communication men communicate better than women, where as women are more hesitant and shy and cannot completely express what they think. This could be the reason that women are not comfortable in communicating with the opposite sex where as males do not feel discomfort in this.

When it comes to aggression males are tend to be more aggressive but as females are less physically strong they tend to develop other means to reach successful results. In domestic violence women get more injured physically but they instead took other means to hurt their male counterpart. When at a leading position women usually give out responses like how about if we do this or what do you think about this idea and are somewhat though to be as soft leaders where as men give out firm orders for the tasks to be accomplished and do not take such advises from co-workers.
