Geometry Form K Answers:

Basic Algebraic Geometry I.R. Shafarevich, 2012-12-06 Algebraic geometry occupied a central place in the mathematics of the last century. The deepest results of Abel, Riemann, Weierstrass, many of the most important papers of Klein and Poincaré belong to this domain. At the end of the last and the beginning of the present century the attitude towards algebraic geometry changed abruptly. Around 1910 Klein wrote: "When I was a student Abelian functions as an after effect of Jacobi's tradition were regarded as the undisputed summit of mathematics and each of us as a matter of course had the ambition to forge ahead in this field." And now the young generation hardly know what Abelian functions are. *Vorlesungen über die Entwicklung der Mathematik im XIX Jahrhundert* Springer Verlag Berlin 1926 Seite 312. The style of thinking that was fully developed in algebraic geometry at that time was too far removed from the set-theoretical and axiomatic spirit which then determined the development of mathematics. Several decades had to lapse before the rise of the theory of topological differentiable and complex manifolds, the general theory of fields, the theory of ideals in sufficiently general rings, and only then it became possible to construct algebraic geometry on the basis of the principles of set-theoretical mathematics. Around the middle of the present century algebraic geometry had undergone to a large extent such a reshaping process. As a result it can again lay claim to the position it once occupied in mathematics.

Principles of Locally Conformally Kähler Geometry Liviu Ornea, Misha Verbitsky, 2024-05-02 This monograph introduces readers to locally conformally Kähler (LCK) geometry and provides an extensive overview of the most current results. A rapidly developing area in complex geometry dealing with non-Kähler manifolds, LCK geometry has strong links to many other areas of mathematics including algebraic geometry, topology, and complex analysis. The authors emphasize these connections to create a unified and rigorous treatment of the subject suitable for both students and researchers. Part I builds the necessary foundations for those approaching LCK geometry for the first time with full, mostly self-contained proofs and also covers material often omitted from textbooks such as contact and Sasakian geometry, orbifolds, Ehresmann connections, and foliation theory. More advanced topics are then treated in Part II including non-Kähler elliptic surfaces, cohomology of holomorphic vector bundles on Hopf manifolds, Kuranishi and Teichmüller spaces for LCK manifolds with potential and harmonic forms on Sasakian and Vaisman manifolds. Each chapter in Parts I and II begins with motivation and historic context for the topics explored and includes numerous exercises for further exploration of important topics. Part III surveys the current research on LCK geometry describing advances on topics such as automorphism groups on LCK manifolds, twisted Hamiltonian actions, and LCK reduction. Einstein-Weyl manifolds and the Futaki invariant and LCK geometry on nilmanifolds and on solvmanifolds. New proofs of many results are given using the methods developed earlier in the text. The text then concludes with a chapter that gathers over 100 open
