The goal was to summarize the theoretical and empirical bases for cognitive systems and to present exemplary developments in the field. Following the workshop a great deal of planning went into the creation of this book. Eleven of the twenty six presenters were asked to contribute chapters and four chapters are the product of the breakout sessions in which critical topics were discussed among the participants. An introductory chapter provides the context for this compilation. Cognitive Systems thus presents a unique merger of cognitive modeling and intelligent systems and attempts to overcome many of the problems inherent in current expert systems. **Mathematics** Candia Morgan, Anne Watson, Clare Tikly, 2004. This accessible and thought provoking book considers what beginning teachers need to know about learning, teaching, assessment, curriculum and professional development in the context of teaching mathematics to eleven to nineteen year olds. The authors show how mathematics teachers can communicate their own enthusiasm for the subject and inspire their pupils to learn and enjoy learning. They provide practical advice which will help teachers and student teachers to plan, organize, manage and assess classroom work, make decisions about the content, ordering and level of difficulty of lessons, make sense of new subject material and how it contributes to wider educational aims, develop professionally by developing the subject as a whole. This is a comprehensive introduction to teaching mathematics in the secondary school which will be invaluable to teachers beginning their careers and those who are training to be mathematics teachers.
