The Geometry of Spacetime James J. Callahan, 2013-03-09 In 1905 Albert Einstein offered a revolutionary theory special relativity to explain some of the most troubling problems in current physics concerning electromagnetism and motion Soon afterwards Hermann Minkowski recast special relativity essentially as a new geometric structure for spacetime These ideas are the subject of the first part of the book The second part develops the main implications of Einstein's general relativity as a theory of gravity rooted in the differential geometry of surfaces The author explores the way an individual observer views the world and how a pair of observers collaborates to gain objective knowledge of the world He has tried to encompass both the general and special theory by using the geometry of spacetime as the unifying theme of the book To read it one needs only a first course in linear algebra and multivariable calculus and familiarity with the physical applications of calculus

Power Geometry in Algebraic and Differential Equations A.D. Bruno, 2000-08-03 The geometry of power exponents includes the Newton polyhedron normal cones of its faces power and logarithmic transformations On the basis of the geometry universal algorithms for simplifications of systems of nonlinear equations algebraic ordinary differential and partial differential were developed The algorithms form a new calculus which allows to make local and asymptotical analysis of solutions to those systems The efficiency of the calculus is demonstrated with regard to several complicated problems from Robotics Celestial Mechanics Hydrodynamics and Thermodynamics The calculus also gives classical results obtained earlier intuitively and is an alternative to Algebraic Geometry Differential Algebra Lie group Analysis and Nonstandard Analysis
