

Guided Investigation 2.5

FINDING A LINE PARALLEL TO A GIVEN LINE THROUGH A GIVEN POINT

Step 1: Fold your patty paper to create a given line or use your straightedge to draw a line. Draw a point which is not on the given line.

Step 2: Fold the given line onto itself so that the fold passes through the given point. The line formed by this fold is perpendicular to the given line.

Step 3: Unfold the paper and fold the new line onto itself to form another line perpendicular to the second line. Be sure this last folded line goes through the point.

Step 4: Unfold and you will have two lines (the given line and the last folded line) that are parallel to each other and perpendicular to the second line.

In this investigation you used the fact that if two lines (\overleftrightarrow{AB} and \overleftrightarrow{CD}) are perpendicular to the same line (\overleftrightarrow{EF}) and all three lines lie on the same plane, then the two lines (\overleftrightarrow{AB} and \overleftrightarrow{CD}) must be parallel. This is an important idea that will be used in future investigations.

This construction will allow you to create parallelograms, rectangles, and other figures with parallel lines. Try folding a parallelogram on your patty paper. You will discover properties of parallelograms in a later lesson.
