

# Exercise Answers Set 7

1. What methods are implemented in Critter? What does each do?
  - act, getActors, processActors, getMoveLocations, selectMoveLocation, makeMove
    - act checks that the Critter is in a grid and if so calls the other methods
    - getActors gets the neighboring (1 cell away) Actors
    - processActors eats (removes) actors that are not Rocks or Critters
    - getMoveLocations returns valid empty neighboring locations (1 cell away)
    - selectMoveLocation returns current location if no empty neighbors or a random empty neighbor
    - makeMove if the location is null remove self from grid otherwise move to the location
2. What are the 5 basic actions common to all Critters when they act?
  - Get actors to process, process the actors, get a list of locations, select a location, move
3. Should subclasses of Critter override the getActors() method?
  - Yes, if they want to control the type of actors to interact with or to get more than just the neighboring Actors (one cell away)
4. Describe 3 ways a Critter could process actors?
  - Change their color, Change their direction, remove them from the grid, etc
5. What 3 methods must be invoked to make a Critter move?
  - getMoveLocations, selectMoveLocation, makeMove.
6. Why is there no Critter constructor?
  - Because it inherits from Actor and Actor has a no-arg constructor so by not providing any constructors the compiler will add a no-arg constructor that calls super()

*Robotics* Aaron M. Roth, Dinesh Manocha, Ram D. Sriram, Elham Tabassi, 2024-03-19 This book surveys the state of the art in explainable and interpretable reinforcement learning RL as relevant for robotics While RL in general has grown in popularity and been applied to increasingly complex problems several challenges have impeded the real world adoption of RL algorithms for robotics and related areas These include difficulties in preventing safety constraints from being violated and the issues faced by systems operators who desire explainable policies and actions Robotics applications present a unique set of considerations and result in a number of opportunities related to their physical real world sensory input and interactions The authors consider classification techniques used in past surveys and papers and attempt to unify terminology across the field The book provides an in depth exploration of 12 attributes that can be used to classify explainable interpretable techniques These include whether the RL method is model agnostic or model specific self explainable or post hoc as well as additional analysis of the attributes of scope when produced format knowledge limits explanation accuracy audience predictability legibility readability and reactivity The book is organized around a discussion of these methods broken down into 42 categories and subcategories where each category can be classified according to some of the attributes The authors close by identifying gaps in the current research and highlighting areas for future investigation
