Narratives of Qualitative Research Josh Tenenbarg, 2024-05-21 Narratives of Qualitative Research uses a novel form of writing about how to do qualitative research called a praxis narrative Each narrative is told from the author's perspective in carrying out one of his past research studies in the social sciences Told chronologically and in a first person voice the narratives position the reader alongside the narrator so as to vicariously experience how research happens in its situated particulars Rather than a set of idealizations and universalized pronouncements the author reveals what really goes on when one is in the thick of complex and challenging research studies the points of trouble along with the successes This will be relevant to researchers who have already undertaken one or more empirical research studies though not necessarily using qualitative approaches and now find themselves facing something new a new analytic method a new theoretical lens a new form of data collection a new domain of research questions a new rhetorical approach This requires letting go of the secure handholds of prescribed methods and responding to the contingencies that arise in the midst of the research The reader is invited to follow along as the author makes visible his praxis of qualitative research Unlike more conventional texts in this unique alternative the reader can follow the author's journey through his research studies as a way to reorient their conception of qualitative research and their own praxis of it This is fascinating reading for qualitative researchers and students taking qualitative research courses across the social sciences education and behavioural sciences *Frontiers in Statistical Quality Control 8* Hans-Joachim Lenz, Peter-Theodor Wilrich, 2006-08-08 In Canada acceptance sampling has been used in legal metrology applications for nearly four decades One of its principal uses has been in the quality control of utility meters that measure electricity or natural gas supplied to consumers By law such meters must be inspected for conformance to specification requirements prior to use and be periodically inspected while in use With few exceptions due to the numerous utility companies in the country and their varied practices the meters exist in the form of isolated lots for inspection purposes

The proportion of nonconforming meters in a lot has traditionally defined lot quality for utility meter sampling inspection purposes Another principal application of acceptance sampling has been in the quality control of the net contents of packaged products sold in the marketplace Such products include those sold on the basis of such measures as weight volume length and area In this particular application products are also usually inspected on an isolated lot basis for regulatory purposes However lot quality is usually measured on the basis of two criteria for such products the proportion of nonconforming packages in the lot and the lot mean quantity This section reviews Canadian quality control practices in these two areas of application highlighting some of the deficiencies and issues Three classing plans are proposed as a possible solution to some of these deficiencies and issues

Citizens in Europe Giovanni Moro, 2011-12-04 In the Community building process citizens are the most invoked and feared but at the same time the least known subject This lack of knowledge nourishes the citizens detachment from the European Union and itself emerged in well known cases such as the French and Dutch referenda on the Constitutional Treaty or the public concern towards the EU policy on immigration This gap is true especially for active citizenship organizations operating in the European policy making not only in Brussels but also and above all at national and local levels and this book is aimed at filling this knowledge gap The book is divided into two parts The first part of the book focuses on the way in which the literature on EU governance and citizenship and on participatory democracy deals with citizen activism in public policy making The second part discusses a number of empirical research projects on civic activism

in Europe This book aims on the one hand to bridge the academic debate to more policy oriented debates in which active citizenship organizations and policy makers are involved and on the other hand to bridge theoretical discussion of the nature of the EU with the empirical literature based on the study of civic activism in Europe and at the national level The distinctiveness of the book is that it tries to overcome both the methodological nationalism that affects the research and public debate on the EU the normative attitude of most part of European studies in favor of an approach aimed at describing phenomena and the habit of dealing with civic associations in Europe by referring only to the Brussels Civil Society making it of interest to both policy makers as well as students and scholars in European Studies Political Science Sociology and International Relations

Knowledge and Power in Collaborative Research Louise Phillips, 2013 Collaborative research embraces a multiplicity of practices in which social actors are invited to participate in the research process as co producers of knowledge But what is actually meant by co production in collaborative research Knowledge and Power in Collaborative Research presents a range of critical reflexive strategies for understanding and tackling the challenges emanating from the tensions that arise in the meeting between different participants knowledge forms and knowledge interests The chapters anchor discussion of ethical epistemological and methodological questions in sustained empirical analyses of cases of collaborative knowledge production The book covers diverse theoretical approaches such as dialogic communication theory actor network theory poststructuralist writing as inquiry institutional ethnography dialogic action research and pragmatic action research The empirical cases span a broad spectrum of empirical fields of social practice health services organisational change research science communication environmental communication in intermediary NGOs participatory governance in relation to urban planning and digital communication and virtual worlds

In Teachers' Hands Richard J. Stiggins, Nancy Faires Conklin, 1992-07-01 This book marks the starting point of a profound shift in assessment priorities detailing the results of a decade long program of research on classroom assessment environments It demonstrates how important sound classroom assessments are to student well being and provides insights into the complex demands of day to day classroom assessment on teachers who have been taught little about assessment in their training programs As a nation we spend billions of dollars on educational assessment including hundreds of millions for international and national assessments and additional hundreds of millions for statewide testing programs On top of these the standardized tests that form the basis of district wide testing programs represent a billion dollar industry If we total all of

these expensive highly visible politically important assessments we still account for less than one percent of all the assessments conducted in America s schools The other 99 percent are conducted by teachers in their classrooms on a moment to moment day to day and week to week basis Paradoxically virtually all of our national state and local assessment resources are being devoted to research and development for large scale assessments This book provides specific action programs for improving the quality of the other 99 percent the assessments that really drive what students learn and how they feel about it

How Australia is Studied in China Richard Hu,Diane Hu,2024-04-29 China has arguably the largest community of Australian studies in the world However not much is known about this phenomenon including its emergence rationale interests influences and the implications for strategic Australia China engagement in a region of increasing challenge and uncertainty This volume unpacks how Australia is taught learnt researched communicated and promoted in the Asian giant as well as its largest trade partner In doing so it penetrates the representation and essence of this phenomenon to seek both the Australianness and the Chineseness in it This volume collects contributions from a group of leading and emerging Chinese and Australian scholars who are members and insiders of this community to jointly debate on this intellectual entity and its significant influences and implications Produced at a critical moment of commemorating half a century of China Australia diplomatic relations and four decades of formalised Australian studies in China this volume provides an up to date comprehensive and insightful examination of this Australia China engagement It will be of interest to scholars students policymakers and general readers in areas of Australian studies Chinese studies Asia Pacific studies China Australia relations and international relations

Artificial Intelligence and Human Rights Law in Africa Aderomola Adeola,2025-09-29 This book examines artificial intelligence AI in Africa from a rights based perspective In recent years technology has emerged as a significant disruptor with AI robotics and computer advancement in particular driving changes in societies around the world There are evident and daunting implications across contexts and continents and many countries are rapidly seeking to define patterns of solutions that can foster effective protection against the more challenging impacts of AI This book considers the consequences of AI for civil and political rights social economic and cultural rights and collective rights in Africa with particular reference to the African Charter It considers how AI risks violating the rights enshrined in the Charter and considers how the norms outlined in the African Charter can provide the basis for a response Overall this book examines how a rights based approach to AI can be realized emphasising the imperatives for steering implementation Providing an important guide for strategic action for the protection of human rights in the context of AI this book will be an important read for researchers policymakers and students in the fields of human rights and technology in Africa

The 5-year Outlook on Science and Technology ,1981 **Collected Works (volume 4): Unpublished Papers** Stephen Luttrell,2023-10-25 The motivation for the research that is described in these volumes is the wish to explain things in terms of their underlying causes rather than merely being satisfied with phenomenological descriptions When this reductionist

approach is applied to information processing it allows the internal structure of information to be analysed so information processing algorithms can then be derived from first principles One of the simplest examples of this approach is the diagonalisation of a data covariance matrix there are many variants of this basic approach such as singular value decomposition in which the assumed independent components of high dimensional data are identified and extracted The main limitation of this type of information analysis approach is that it is based on linear algebra applied globally to the data space so it is unable to preserve information about any local data structure in the data space For instance if the data lives on a low dimensional curved manifold embedded in the data space then only the global properties of this manifold would be preserved by global linear algebra methods In practice data whose high dimensional structure is non trivial typically lives on a noisy version of a curved manifold so techniques for analysing such data must automatically handle this type of structure For instance a blurred image of a point source is described by its underlying degrees of freedom i e the position of the source and as the source moves about it generates a curved manifold that lives in the high dimensional space of pixel values of the sampled image The basic problem is then to deduce the internal properties of this manifold by analysing examples of such images A more challenging problem would be to extend this analysis to images that contain several overlapping blurred images of point sources and so on There is no limit to the complexity of the types of high dimensional data that one might want to analyse These methods then need to be automated so that they do not rely on human intervention which would then allow them to be inserted as components into information processing networks The purpose of the research that is described in these volumes is to develop principled information processing methods that can be used for such analysis Self organising information processing networks arise naturally in this context in which ways of cutting up the original manifold into simpler pieces emerge automatically

Designing Networks for Innovation and Improvisation Matthäus P. Zylka, Hauke Fuehres, Andrea Fronzetti Colladon, Peter A.
