The section **Preparing** covers the range of methodological, ethical, and practical aspects that researchers need to address before starting to write their paper. The section **Analyzing** reviews commonplace problems in the statistical analysis and presentation and how to resolve those problems. The section **Drafting** describes what to write in all the various parts of a paper: the Introduction, Methods, Results, Discussion, Abstract, etc. The section **Revising** explains and illustrates how to improve the writing style of any manuscript. The section **Publishing** discusses how to navigate the peer review process and all other practical aspects of the publishing phase. This book draws on the author's decade of experience as an independent medical writer and research consultant, but it is not written merely as the personal opinion of yet another expert. The entire book is grounded in the existing scientific and scholarly literature with extensive references and a lengthy annotated bibliography so readers can quickly obtain more information on any aspect they want. Thus, this book provides a more evidence-based, scholarly account of how medical scientific papers should be written in order to improve medical communication and accelerate scientific progress.
