Lloyd's Register Technical Association Session 1985-1986 Lloyd's Register Foundation, 1985-01-01 The Lloyd s Register Technical Association LRTA was established in 1920 with the primary objective of sharing technical expertise and knowledge within Lloyd s Register Publications have consistently been released on a yearly basis with a brief interruption between 1938 and 1946 These publications serve as a key reference point for best practices and were initially reserved for internal use to maximise LR s competitive advantage Today the LRTA takes a fresh approach focusing on collaboration by combining professional expertise from across LRF Group to ensure a frequent output of fresh perspectives and relevant content The LRTA has evolved into a Group wide initiative that identifies captures and shares knowledge spanning various business streams and functions To support this modern approach the LRTA has adopted a new structure featuring representatives and senior governance across the business streams and the LR Foundation The

Lloyd's Register Technical Association Papers should be seen as historical documents representing earlier viewpoints and are not reflective of current thinking and perspectives by the current LR Technical Association. The Lloyd's Register Staff Association LRSA changed its name to the Lloyd's Register Technical Association LRTA in 1973. *Progress in Artificial Intelligence* Luis Miguel Correia, Luís Paulo Reis, José Manuel Cascalho, 2013-09-04. Construction Machines Dinko Mikulić, Draško Mück, 2024-08-30. This book provides knowledge to professionals on how to model, calculate, and design machinery for construction operations. Carrying out construction works is unthinkable without construction machines. Awareness of role and properties of construction machines is very important for their design, production, application, and maintenance. This book defines the basic characteristics of the main representatives of construction machines for earthworks: bulldozers, loaders, excavators, vibratory rollers, and transport vehicles: truck cranes, telehandlers, and construction trucks. The book presents a step-by-step explanation of the key technical solutions of mobile construction machines in an expert and illustrative manner with the help of photographic images, schematics, and case studies. The book will be of use to professionals in industry and students in engineering departments. *Field and Service Robotics* Alexander Zelinsky, 2012-12-06. Joe Engelberger, the pioneer of the robotics industry, wrote in his 1989 book *Robotics in Service* that the inspiration to write his book came as a reaction to an industry-sponsored forecast study of robot applications which predicted that in 1995 applications of robotics outside factories, the traditional domain of industrial robots, would amount to less than 1% of total sales. Engelberger believed that this forecast was very wrong and instead predicted that the non-industrial class of robot applications would become the largest class. Engelberger's prediction has yet to come to pass. However, he did correctly foresee the growth in non-traditional applications of robots. Robots are now beginning to march from the factories and into field and service applications. This book presents a selection of papers from the first major international conference dedicated to field and service applications of robotics. This selection includes papers from the leading research laboratories in the world together with papers from companies that are building and selling new and innovative robotic technology. It describes interesting aspects of robots in the field ranging from mining, agriculture, construction, cargo handling, subsea operations, removal of landmines to terrestrial exploration. It also covers a diverse range of service applications such as cleaning, propagating plants, and aiding the elderly and handicapped, and gives considerable

attention to the technology required to realise robust reliable and safe robots *Recent Advances in Systems, Control and Information Technology* Roman Szewczyk, Małgorzata Kaliczyńska, 2016-11-29 This book presents the proceedings of the International Conference on Systems Control and Information Technologies 2016 It includes research findings from leading experts in the fields connected with INDUSTRY 4.0 and its implementation especially intelligent systems advanced control information technologies industrial automation robotics intelligent sensors metrology and new materials Each chapter offers an analysis of a specific technical problem followed by a numerical analysis and simulation as well as the implementation for the solution of a real world problem *Dynamic Positioning for Engineers* Surender Kumar, 2020-10-28 Dynamic Positioning for Engineers enables the reader to acquire the basic knowledge of the concepts and understanding of the dynamic positioning DP system from the systems perspective This book illustrates the system subsystems and components of the DP system to better tackle maintenance problems and breakdowns leading to an increased mean time between failures and effective fault finding on dynamic positioning DP related equipment Overall this text will help professionals reduce downtime and higher repair costs Aimed at onboard electrical engineers engine room watch officers chief engineers DP professionals onboard in onshore officers and those taking DP training courses this book Explains automation and its application in the DP system Describes environmental sensors and position reference sensors as important inputs to the DP system Includes chapters on power management and thrusters Aids engineers in maintaining a the DP system in good operational condition

Quad Rotorcraft Control Luis Rodolfo García Carrillo, Alejandro Enrique Dzul López, Rogelio Lozano, Claude Pégard, 2012-08-12 Quad Rotorcraft Control develops original control methods for the navigation and hovering flight of an autonomous mini quad rotor robotic helicopter These methods use an imaging system and a combination of inertial and altitude sensors to localize and guide the movement of the unmanned aerial vehicle relative to its immediate environment The history classification and applications of UAVs are introduced followed by a description of modelling techniques for quad rotors and the experimental platform itself A control strategy for the improvement of attitude stabilization in quad rotors is then proposed and tested in real time experiments The strategy based on the use low cost components and with experimentally established robustness avoids drift in the UAV's angular position by the addition of an internal control loop to each electronic speed controller ensuring that during hovering flight all four motors turn at almost the same speed The quad rotor's Euler angles being very close to the origin other sensors like GPS or image sensing equipment can be incorporated to perform autonomous positioning or trajectory tracking tasks Two vision based strategies each designed to deal with a specific kind of mission are introduced and separately tested The first stabilizes the quad rotor over a landing pad on the ground it extracts the 3 dimensional position using homography estimation and derives translational velocity by optical flow calculation The second combines colour extraction and line detection algorithms

to control the quad rotor s 3 dimensional position and achieves forward velocity regulation during a road following task In order to estimate the translational dynamical characteristics of the quad rotor relative position and translational velocity as they evolve within a building or other unstructured GPS deprived environment imaging inertial and altitude sensors are combined in a state observer The text give the reader a current view of the problems encountered in UAV control specifically those relating to quad rotor flying machines and it will interest researchers and graduate students working in that field The vision based control strategies presented help the reader to a better understanding of how an imaging system can be used to obtain the information required for performance of the hovering and navigation tasks ubiquitous in rotored UAV operation
