Algebras and Jordan Type held July 18 22 2022 at the Universit Grenoble Alpes Grenoble France Articles included are a survey and open problems on deformations and relation to the Hilbert scheme a survey of commuting nilpotent matrices and their Jordan type and a survey of Specht ideals and their perfection in the two rowed case Other articles treat topics such as the Jordan type of local Artinian algebras Waring decompositions of ternary forms questions about Hessians a geometric approach to Lefschetz properties deformations of codimension two local Artin rings using Hilbert Burch matrices and parametrization of local Artinian algebras in codimension three Each of the articles brings new results on the boundary of commutative algebra and algebraic geometry   *Algebraic Curves and Their Applications* Lubjana Beshaj,Tony Shaska,2019-02-26 This volume contains a collection of papers on algebraic curves and their applications While algebraic curves traditionally have provided a path toward modern algebraic geometry they also provide many applications in number theory computer security and cryptography coding theory differential equations and more Papers cover topics such as the rational torsion points of elliptic curves arithmetic statistics in the moduli space of curves combinatorial descriptions of semistable hyperelliptic curves over local fields heights on weighted projective spaces automorphism groups of curves hyperelliptic curves dessins d enfants applications to Painlev equations descent on real algebraic varieties quadratic residue codes based on hyperelliptic curves and Abelian varieties and cryptography This book will be a valuable resource for people interested in algebraic curves and their connections to other branches of mathematics   **Davenport–Zannier Polynomials and Dessins d'Enfants** Nikolai M. Adrianov,Fedor Pakovich,Alexander K. Zvonkin,2020-06-29 The French expression dessins d enfants means children s drawings This term was coined by the great French mathematician Alexandre Grothendieck in order to denominate a method of pictorial representation of some highly interesting classes of polynomials and rational functions The polynomials studied in this book take their origin in number theory The authors show how by drawing simple pictures one can prove some long standing conjectures and formulate new ones The theory presented here touches upon many different fields of mathematics The major part of the book is quite elementary and is easily accessible to an undergraduate student The less elementary parts such as Galois theory or group representations and their characters would need a more profound knowledge of mathematics The reader may either take the basic facts of these theories for granted or use our book as a motivation and a first approach to these subjects   **Existence of Unimodular Triangulations–Positive Results** Christian Haase,2021-07-21 Unimodular triangulations of lattice polytopes arise in algebraic geometry commutative algebra integer programming and of course combinatorics In this article we review several classes of polytopes that do have unimodular triangulations and constructions that preserve their existence We include in particular the first effective proof of the classical result by Knudsen Mumford Waterman stating that every lattice polytope has a dilation that admits a unimodular triangulation Our proof yields an explicit although doubly exponential bound for the dilation factor   *Modern Aspects of Random Matrix Theory* Van H.
