The neck of the giraffe:

- Forefathers or giraffes had short necks and short limbs.
- They had to compete for limited food available on the ground.
- Some members of the group acquired variations developing long limbs and long necks.
- These changes helped them to obtain foliage from the upper branches of the trees.
- As a result they could evade competition and gain advantage over the other members with short necks and short limbs.
- Thus present day giraffes evolved by accumulating favorable variations.
