1.6 Scientists compare the number of differences in the amino acid sequence to see how closely related species are. Fewer differences in the amino acid sequence mean the species are more closely related.

Cytochrome C is a protein that occurs in many species. The amino acid sequence of this protein differs between species.

The table below shows the number of differences in the amino acid sequences of three species, A, B and C.

|           | SPECIES B | SPECIES C |
|-----------|-----------|-----------|
| SPECIES A | 11        | 3         |
| SPECIES B |           | 10        |

1.6.1 What type of evidence for evolution is being used in this table? (1)

**Dual-use life science research and biosecurity in the 21st Century: Social, Technical, Policy, and Ethical Challenges** Jonathan E. Suk, Kathleen M. Vogel, Amanda Jane Ozin, 2015-06-04 In September 2011 scientists announced new experimental findings that would not only threaten the conduct and publication of influenza research but would have significant policy and intelligence implications The findings presented a modified variant of the H5N1 avian influenza virus hereafter referred to as the H5N1 virus that was transmissible via aerosol between ferrets These results suggested a worrisome possibility the existence of a new airborne and highly lethal H5N1 virus that could cause a deadly global pandemic In response a series of international discussions on the nature of dual use life science arose These discussions addressed the complex social technical political security and ethical issues related to dual use research This Research Topic will be devoted to contributions that explore this matrix of issues from a variety of case study and international perspectives

**Microbial Biodegradation and Bioremediation** Surajit Das, Hirak Ranjan Dash, 2021-11-24 Microbial Biodegradation and Bioremediation Techniques and Case Studies for Environmental Pollution Second Edition describes the successful application of microbes and their derivatives for bioremediation of potentially toxic and relatively novel compounds in the environment Our natural biodiversity and environment is in danger due to the release of continuously emerging potential pollutants by anthropogenic activities Though many attempts have been made to eradicate and remediate these noxious elements thousands of xenobiotics of relatively new entities emerge every day thus worsening the situation Primitive microorganisms are highly adaptable to toxic environments and can reduce the load of toxic elements by their successful transformation and remediation This completely updated new edition presents many new technologies and techniques and includes theoretical context and case studies in every chapter Microbial Biodegradation and Bioremediation Techniques and Case Studies for Environmental Pollution Second Edition serves as a single source reference and encompasses all categories of pollutants and their applications in a convenient comprehensive format for researchers in environmental science and engineering pollution environmental microbiology and biotechnology Describes many novel approaches of microbial bioremediation including genetic engineering metagenomics microbial fuel cell technology biosurfactants and biofilm based bioremediation Introduces relatively new hazardous elements and their bioremediation practices including oil spills military waste water greenhouse gases polythene wastes and more Provides the most advanced techniques in the field of bioremediation including insilico approach microbes as pollution indicators use of bioreactors techniques of pollution monitoring and more Completely updated and expanded to include topics and techniques such as genetically engineered bacteria environmental health nanoremediation heavy metals contaminant transport and in situ and ex situ methods Includes theoretical context and case studies within each chapter

The Biologist's Imagination William R. Hoffman, Leo Furcht, 2014

Discusses the history of technological innovation in the biosciences      Routledge Handbook of Global Health Security Simon Rushton, Jeremy Youde, 2014-08-07 This new Handbook presents an overview of cutting edge research in the growing field of global health security Over the past decade the study of global health and its interconnection with security has become a prominent and rapidly growing field of research Ongoing debates question whether health and security should be linked which if any health issues should be treated as security threats what should be done to address health security threats and the positive and negative consequences of securitizing health In academic and policy terms the health security field is a timely and dynamic one and this handbook will be the first work comprehensively to address this agenda Bringing together the leading experts and commentators on health security issues from across the world the volume comprises original and cutting edge essays addressing the key issues in the field and also highlighting currently neglected avenues for future research The book intends to provide an accessible yet sophisticated introduction to the key topics and debates and is organised into four key parts Health Securities the fundamental conceptual issues historical links between health and security and the various ways of conceptualising health as a security issue Threats those health issues which have been most frequently discussed in security terms Responses the wide range of contemporary security driven responses to health threats Controversies the securitization of health its impact on rights and justice and the potential distortion of the global health agenda This book will be of great interest to students of global health security public health critical security studies and International Relations in general      *Sustainable Value Chains in the Global Garment Industry* Rachel Alexander, Peter Lund-Thomsen, 2023-05-25 The widespread prevalence of economically socially and environmentally unsustainable practices in global value chains is a pressing international challenge The way to improve systems and practices in the complex networks that characterize contemporary production processes is not clear cut Finding solutions requires innovation This Element examines the structures of garment value chains and explores how innovation related to sustainability is taking place in these chains Furthermore it identifies barriers and opportunities for innovations to break through and stimulate industry wide change      **Science Fictions** Stuart Ritchie, 2020-07-21 An insider's view of science reveals why many scientific results cannot be relied upon and how the system can be reformed Science is how we understand the world Yet failures in peer review and mistakes in statistics have rendered a shocking number of scientific studies useless or worse badly misleading Such errors have distorted our knowledge in fields as wide ranging as medicine physics nutrition education genetics economics and the search for extraterrestrial life As Science Fictions makes clear the current system of research funding and publication not only fails to safeguard us from blunders but actively encourages bad science with sometimes deadly consequences Stuart Ritchie's own work challenging an infamous psychology experiment helped spark what is now widely known as the replication crisis the realization that supposed scientific truths are often just plain wrong Now he reveals the very human biases misunderstandings and deceptions that undermine the scientific endeavor from contamination

in science labs to the secret vaults of failed studies that nobody gets to see from outright cheating with fake data to the more common but still ruinous temptation to exaggerate mediocre results for a shot at scientific fame Yet Science Fictions is far from a counsel of despair Rather it s a defense of the scientific method against the pressures and perverse incentives that lead scientists to bend the rules By illustrating the many ways that scientists go wrong Ritchie gives us the knowledge we need to spot dubious research and points the way to reforms that could make science trustworthy once again

**Antioxidant-Antidiabetic Agents and Human Health** Oluwafemi Oguntibeju,2014-02-05 The human system employs the use of endogenous enzymatic as well as non enzymatic antioxidant defence systems against the onslaught of free radicals and oxidative stress Enzymatic antioxidants and non enzymatic antioxidants work synergistically with each other using different mechanisms against different free radicals and stages of oxidative stress Dietary and lifestyle modifications are seen as the mainstay of treatment and management of chronic diseases such as diabetes mellitus The major aims of dietary and lifestyle changes are to reduce weight improve glycaemic control and reduce the risk of coronary heart disease which accounts for 70 80% of deaths among those with diabetes It is also important to note that medicinal plants have been used as medicines since ancient time and continue to play significant role even in modern medicine in management and treatment of chronic diseases Impressive numbers of modern therapeutic agents have been developed from plants Phytochemicals have been isolated and characterised from fruits such as grapes and apples vegetables such as broccoli and onion spices such as turmeric beverages such as green tea and red wine as well as many other sources The WHO estimates that approximately 80% of the worlds inhabitants rely on traditional medicine for their primary health care and many medicinal plants have ethno medical claims of usefulness in the treatment of diabetes and other chronic diseases globally and have been employed empirically in antidiabetic antihyperlipidemic antihypertensive antiinflammatory and antiparasitic remedies This book examines the role of antioxidant rich natural products in management and treatment of diabetes and other chronic diseases

*The H5N1 Virus* Philip R. Egert,2019-11-18 This book is the first study of its kind that reveals the social justice linkages between three unique characteristics of the highly pathogenic avian influenza H5N1 virus namely veterinary scourge public health contagion fear and potential bioterrorist weapon With its extensive referencing it will be invaluable for scholars of security studies global public health and international relations as well as for professionals diplomats and practitioners with an interest in the relationship between global health security and social justice Comprised of two major sections the book examines the various representations of knowledge about the H5N1 virus The first part explores the three major narratives that were used to describe the virus during its 20 year journey from 1996 to 2016 During this time the virus multiplied its ontological status through narratives that described a localized animal virus a global public health crisis and finally an irrational contagion fear The text s second section describes in detail a unique aspect of the H5N1 virus s journey as an

emerging infectious disease its representation as a potential weapon for bioterrorists As a result the US government attempted to secure knowledge about the H5N1 virus This attempt produced a global debate between scientists and policy makers over how to balance the nation state s desire for security with the life sciences tradition of openly shared research Known as the dual use dilemma this debate set up binaries of impossible reconciliation between the scientific and security communities This book argues that the H5N1 dual use dilemma obscures larger questions of justice and proposes a new concept of justice knowledge justice as an alternate more globally inclusive framework for exploring a socially just way out of the dilemma
