The Value of Science in Space Exploration James S.J. Schwartz, 2020-03-02 Space exploration especially the recent push for the commercialization and militarization of space is attracting increased attention not only from the wider public and the private sector but also from scholars in a wide range of disciplines At this moment of uncertainty about the future direction of national spaceflight programs The Value of Science in Space Exploration defends the idea often overlooked that the scientific understanding of the Solar System is both intrinsically and instrumentally valuable Drawing on research from the physical sciences social sciences and the humanities James S J Schwartz argues further that there is truly a compelling obligation to improve upon our scientific understanding including our understanding of space environments and that there exists a corresponding duty to engage in the scientific exploration of the Solar System After outlining the underpinning epistemological debates Schwartz tackles how this obligation affects the way we should approach some of the major questions of contemporary space science and policy Is there a need for environmental preservation in space Should humans try to establish settlements on the Moon Mars or elsewhere in the Solar System and if so how In answering these questions Schwartz parleys with recent work in science policy and social philosophy of science to characterize the instrumental value of scientific research identifying space research as a particularly effective generator of new knowledge Additionally whereas planetary protection policies are currently employed to prevent biological contamination only of sites of interest in the search for extraterrestrial life Schwartz contends that all sites of interest to space science ought to be protected Meanwhile both space resource exploitation such as lunar or asteroid mining and human space settlement would result in extensive disruption or destruction of pristine space environments The overall ethical value of these environments in the production of new knowledge and understanding is greater than their value as commercial or real commodities and thus confirms that the exploitation and settlement of space should be avoided until the scientific community develops an adequate understanding of these environments At a time when it is particularly pertinent to consider the ways in which space exploration might help solve some of the world's ethical and resource driven concerns The Value of Science in Space

Exploration is a thought provoking and much needed examination into the world of space
