Dimensioned views of the car showing measurements in English and Metric equivalents

**I**NTRODUCED in 1963, the "S" series sedan model has much in common with the 1500 car, but there are important mechanical differences which necessitate that they should be considered separately.

Type numbers used for this series of cars are 312 and 314, and, as is usual, chassis are numbered in serial, as are engines and transmissions. The model identification plate bearing these numbers, together with relevant chassis numbering, is to be found under the front bonnet, beside the bonnet lock. Chassis serials are to be found on the frame member under the rear seat. It is important that these chassis and/or component serials should be quoted when referring to the concessionaire, or when ordering spare parts.

Unit replacements are available from the concessionaire, and these include such items as engines, transmissions, gearboxes and final drives, together with front axle assemblies.

Chassis layout of the mechanical components is similar to that of the other cars in the range, and features a rear-mounted engine/transmission unit driving the rear road wheels through a final drive unit mounted within the transmission housing. Suspension is independent front and rear, by torsion bars.

Major unit removal, brief notes:

**Engines:** may be taken out after removal of four bolts at top, two from underneath, disconnecting all pipes, wires and controls to unit, and removing downwards. Access to clutch is achieved after taking out engine and removing six securing bolts.

**Gearbox:** may be removed after taking out engine, removing bolts at rear axle flanges and shock absorbers, two bolts in front mounting and two bolts in carrier, brake connections and gearchange coupling.

**Final drive:** this unit is incorporated in gearbox, and access to it is achieved after taking out gearbox.

**Brakes:** require a drum puller to gain access to internal parts, and note that left-hand side units have LEFT-HAND threads. Access to rear brake may be obtained after removal of half-shaft nuts, etc., and use of drum puller.

Power output quoted is: 66 b.h.p. at 4,800 r.p.m., with 24.17 lb ft torque at 3,000 r.p.m. (both S.A.E.).
