 known as Air Mobility and Vertical Envelopment Air Mobility Operations were de veloped by the German Army during WWII
 in the 1930 s The US Army soon adopted this method of offensive operations in 1941 using wooden gliders The glider was
 assisted into the air by being towed by a larger aircraft and then released The pilot had to navigate the large glider loaded
 with a team of infantry soldiers to the landing zone behind enemy lines at night and attempt to land safely Once the pilot
 landed the glider he would join the mission as another infantry soldier with the team that he flew in Although the gliders and
 techniques used were advanced for that time period they did pose some disadvantages Once the aircraft was landed safely
 that team of soldiers were cut off from allied troops Pilots had to be cross trained with infantry tactics so he could operate as
 both roles The air mobility glider was abandoned after WWII after the invention of the helicopter PREFACE 1 November
