Enabling Technologies for Very Large-Scale Synaptic

Electronics Themis Prodromakis,Alexantrou Serb,2018-07-05 An important part of the colossal effort associated with the understanding of the brain involves using electronics hardware technology in order to reproduce biological behavior in silico The idea revolves around leveraging decades of experience in the electronics industry as well as new biological findings that are employed towards reproducing key behaviors of fundamental elements of the brain notably neurons and synapses at far greater speed scale products than any software only implementation can achieve for the given level of modelling detail So far the field of neuromorphic engineering has proven itself as a major source of innovation towards the silicon brain goal with the methods employed by its community largely focused on circuit design analogue digital and mixed signal and standard commercial Complementary Metal Oxide Silicon CMOS technology as the preferred tools of choice when trying to simulate or emulate biological behavior However alongside the circuit oriented sector of the community there exists another community developing new electronic technologies with the express aim of creating advanced devices beyond the capabilities of CMOS that can intrinsically simulate neuron or synapse like behavior A notable example concerns nanoelectronic devices responding to well defined input signals by suitably changing their internal state weight thereby exhibiting synapse like plasticity This is in stark contrast to circuit oriented approaches where the synaptic weight variable has to be first stored typically as charge on a capacitor or digitally and then appropriately changed via complicated circuitry The shift of very much complexity from circuitry to devices could potentially be a major enabling factor for very large scale synaptic electronics particularly if the new devices can be operated at much lower power budgets than their corresponding traditional circuit replacements To bring this promise to fruition synergy between the well established practices of the circuit oriented

approach and the vastness of possibilities opened by the advent of novel nanoelectronic devices with rich internal dynamics is absolutely essential and will create the opportunity for radical innovation in both fields The result of such synergy can be of potentially staggering impact to the progress of our efforts to both simulate the brain and ultimately understand it In this Research Topic we wish to provide an overview of what constitutes state of the art in terms of enabling technologies for very large scale synaptic electronics with particular stress on innovative nanoelectronic devices and circuit system design techniques that can facilitate the development of very large scale brain inspired electronic systems

**Engineering**, 1973-07 New Eye for the Navy David Kite Allison, 1981 This study narrates the origin of radar at the Naval Research Laboratory Radar should be seen as the product not simply of one man or even a group of men but rather as the result of individuals working within the structure of a mission oriented research and development facility To comprehend how radar was developed when it was developed and why one must follow not just the evolution of technical progress but also the administrative and political decisions that shaped it One must understand how the talents and motivations of the people who created this new device were related to the particular institutional situation and historical context in which they

labored The account is the story of a modern research and development laboratory in action It discusses one major accomplishment of one institution But it is also written to contribute to a broader understanding of the history of research and development laboratories in general and of the influence they have had on the course of modern American history The work of the Naval Research Laboratory on radar is a significant episode in that story      **Making Silicon Valley** Christophe Lécuyer, 2006 A history of the innovative practices in the San Francisco area electronics industry that paved the way for the rise of the computer industry in Silicon Valley      *From Insight to Innovation* David P.
