*Electrotherapy Explained* Val Robertson, PhD, Alex Ward, PhD, John Low, Ann Reed, BA, MCSP,

DipTP, 2006-05-01. *Electrotherapy Explained* is an excellent research based exploration of the major types of electrophysical agents used in clinical practice particularly human and also animal. For the fourth edition two new authors join the writing team presenting the latest information for today's clinicians. The text has been completely updated with a major rewrite of the material particularly that on electrical stimulation. This book continues to focus on evidence clinical and biophysical evidence that affects how and which electrotherapies may be of use clinically and when. The inclusion of biophysics as well as clinical evidence and principles of application enables clinicians to move away from traditional recipe based approaches and rely more on their own clinical reasoning. The focus remains on humans but the relevance of the principles for using and applying different modalities is explained clearly providing guidelines for clinicians across disciplines and specialties. Up to date research detailing the evidence both supportive and deprecatory for the use of each modality. Written by experts from biophysics and the clinical domains. Comprehensive and well referenced. Clear and well chosen illustrations elucidate the text. Text boxes and summary sections help to break down what is sometimes a complex subject into manageable and memorable chunks. Contraindications and risks have been updated in light of the most recent research. Three books for the price of one. The website <http://booksite.elsevier.com/9780750688437> contains the entire texts of *Physical Principles Explained* by Low and Reed and *Biophysical Bases of Electrotherapy* by Ward. The text directs readers to the website for further reading at relevant points.

Evolution of Electricity Evgeny Katz, 2025-02-19. While modern science and technology are studied at different

levels in schools, colleges and universities, the history of them, particularly personalized with scientists who contributed to their development, is frequently not known enough. The present book is aimed at filling a gap between the modern knowledge and history of its progress over time. The book structure is different from many other related textbooks and the internet websites; it is giving more personalized overview of the knowledge progress rather than scientific description of the achieved progress. The present book does not pretend to associate any scientific discovery or technological invention with any single person but it gives a broader vision on the progress done by different scientists and engineers.
