on maintaining servicing and repair      **Service Manual Generation (SMG).** ,2004 The objective of this research was to  
enable the automatic generation of verified maintenance instructions The approach to the problem was to divide the overall  
program into three main research areas The first area was to develop state of the art Computer Aided Design CAD analysis  
algorithms to generate valid assembly and disassembly sequences from the 3D CAD geometry The second area targeted  
natural language techniques to generate understandable maintenance instructions and the third area focused on algorithms  
that could support verifying the instructions in an immersive environment with force feedback The program began with the  
development of a high level concept of the solution to each research area and a defined set of tasks for each research area  
that coincided with the high level concepts As the research progressed and more was learned about the problems and the true  
business needs the concepts and subtask efforts were refined This report documents for each research area 1 the solution  
approach 2 the subtasks associated with each area and 3 a discussion of how these subtasks add up to a solution to the  
original problem For each subtask a description of the results achieved including algorithmic descriptions etc and how  
lessons learned during the program affected each subtask Following the research area descriptions is documentation for

wrapping the three technology results into one comprehensive demonstration platform The report then describes how this platform was used to demonstrate the technology capabilities to the user and the results of these demonstrations The final phase of the report discusses the strengths%weaknesses of the technology where it appears to be going and growth areas for the research
