**Medical Image Computing and Computer-Assisted Intervention -- MICCAI 2010** Tianzi Jiang, Nassir Navab, Josien P.W. Pluim, Max A. Viergever, 2010-09-21 The 13th International Conference on Medical Image Computing and Computer Assisted Intervention MICCAI 2010 was held in Beijing China from 20-24 September 2010

The venue was the China National Convention Center CNCC China's largest and newest conference center with excellent facilities

and a prime location in the heart of the Olympic Green adjacent to characteristic constructions like the Bird's Nest National Stadium and the Water Cube National Aquatics Center. MICCAI is the foremost international scientific event in the field of medical image computing and computer-assisted interventions. The annual conference has a high scientific standard by virtue of the threshold for acceptance and accordingly MICCAI has built up a track record of attracting leading scientists, engineers, and clinicians from a wider range of technical and biomedical disciplines. This year we received 786 submissions well in line with the previous two conferences in New York and London. Three program chairs and a program committee of 31 scientists, all with a recognized standing in the field of the conference, were responsible for the selection of the papers. The review process was set up such that each paper was considered by the three program chairs, two program committee members, and a minimum of three external reviewers. The review process was double-blind so the reviewers did not know the identity of the authors of the submission. After a careful evaluation procedure in which all controversial and gray area papers were discussed individually, we arrived at a total of 251 accepted papers for MICCAI 2010, of which 45 were selected for podium presentation and 206 for poster presentation. The acceptance percentage 32% was in keeping with that of previous MICCAI conferences. All 251 papers are included in the three MICCAI 2010 LNCS volumes: *Epidemiology, screening and diagnosis of lung cancer* Yutong He, Xue Qin Yu, Chen Wanqing, Jackilen Shannon, Yingsong Lin, 2023-05-08 **Machine Learning and Decision Support in Stroke** Fabien Scalzo, David S. Liebeskind, 2020-07-09 **Artificial Intelligence and Imaging for Oncology** Poonam Yadav, Zhimin Li, Yuxiang Zhou, 2025-02-18. Recent progress in artificial intelligence (AI) and advanced imaging techniques have brought about exciting diagnostic and therapeutic opportunities in oncology. More and more state-of-the-art CT, PET, and MRI imaging techniques are being applied to tumor imaging and new interdisciplinary fields such as MR-LINAC is booming. We feel there is an urgent need to organize a Research Topic to highlight the application of AI and imaging for various oncology branches such as radiation therapy as we are witnessing an accelerated integration of imaging and therapy to improve the care of cancer patients. Imaging has also been the backbone of the oncology world. It is used for diagnosis as well as planning. MRI has a superior soft tissue contrast but lacks the electron density information for the dose calculation. Alternative approaches use synthetic CT for dose calculation. The development of the MRI-guided system and online adaptation can be considered as the bridge between many specialties, starting from learning about MRI safety by the therapy physicist to the use of AI for robust planning. Active research is done to improve the images, advanced MRI techniques, nuclear medicine, and PET-MRI synthetic images, CBCT for dose calculation for clinical workflows. However, all these topics have a lot of room for exploration. Medical Image Computing and Computer-Assisted Intervention -- MICCAI 2009 Guang-Zhong Yang, David J. Hawkes, Daniel Rueckert, Alison Noble, Chris Taylor, 2009-09-07. The two-volume set LNCS 5761 and LNCS 5762 constitute the refereed proceedings of the 12th International Conference on Medical Image Computing and Computer-Assisted Intervention (MICCAI 2009) held in London, UK, in September 2009. Based on rigorous peer reviews, the

program committee carefully selected 259 revised papers from 804 submissions for presentation in two volumes The first volume includes 125 papers divided in topical sections on cardiovascular image guided intervention and robotics surgical navigation and tissue interaction intra operative imaging and endoscopic navigation motion modeling and image formation image registration modeling and segmentation image segmentation and classification segmentation and atlas based techniques neuroimage analysis surgical navigation and robotics image registration and neuroimage analysis structure and function
