**Computer Systems** Stephen H. Kaisler,2020-10-22 This volume describes General Electric Corporation s venture into developing second and third generation mainframe computer systems The General Electric Corporation GE which began its life as the Edison Electric Co was long involved in electrical appliances and industrial machines It was also a founder of the Radio Corporation of America which eventually became one of its competitors and developed many electrical systems in order to control different types of industrial machines Its breakthrough into computing came with its winning bid to provide the computing systems for the Electronic Recording Method of Accounting system developed for the Bank of America by the Stanford Research Institute The success of this project led GE to develop the GE 200 series which was the foundation for commercial timesharing The GE 235 was selected by Dartmouth for its Dartmouth Time Sharing System DTSS an innovative academic time sharing system BASIC was developed on the GE 235 computer system under DTSS GE enhanced it to develop its Mark II III Time Sharing System apparently the first commercial time sharing service in the world GE develop the GE 300 400 systems for industrial process control The GE 600 series replaced the GE 200 series and demonstrated innovation in time sharing systems The GE 645 was selected to host Multics which was developed by MIT However GE felt that it could not compete in computing against IBM Univac and other mainframes competitors so it folded its tent and sold its Computer Division to Honeywell Inc Nevertheless GE will be remembered for many innovations which continue to be used in modern computing systems      Interventional Magnetic Resonance Imaging Jörg F. Debatin,Gerhard Adam,2012-12-06 One of the

most amazing and spectacular developments in modern radiology has been the rapid growth and expansion of so called interventional radiology which can also be described as minimally invasive therapy guided by radiological imaging Many applications of this method are now widely in use in different organs particularly in the vascular system Everybody is well aware of the shortcomings and drawbacks of the radiological modalities currently used for guiding minimally invasive procedures Ultrasound although it has the advantage of being absolutely harmless to the patient and the operator cannot be used for many procedures because it does not provide the precise anatomical information needed for a safe performance of these procedures Rontgen rays provide superb anatomical insight to guide delicate manipulations inside the human body but as operations tend to become longer and more complicated the radiation dose for patients as well as for operators is becoming an increasing source of concern It is therefore logical that we should explore the possibilities for interventional

radiological procedures provided by the latest imaging modality magnetic resonance imaging taking advantage of the specific physical properties of this method and the absence of ionizing radiation It soon became evident that this new approach represents a tremendous challenge involving the development of new hardware and software new catheters and other material that can be used in a magnetic environment etc

**Instrument Engineers' Handbook, Volume Two** Bela G. Liptak, 2018-10-08 The latest update to Bela Liptak's acclaimed bible of instrument engineering is now available Retaining the format that made the previous editions bestsellers in their own right the fourth edition of Process Control and Optimization continues the tradition of providing quick and easy access to highly practical information The authors are practicing engineers not theoretical people from academia and their from the trenches advice has been repeatedly tested in real life applications Expanded coverage includes descriptions of overseas manufacturer's products and concepts model based optimization in control theory new major inventions and innovations in control valves and a full chapter devoted to safety With more than 2000 graphs figures and tables this all inclusive encyclopedic volume replaces an entire library with one authoritative reference The fourth edition brings the content of the previous editions completely up to date incorporates the developments of the last decade and broadens the horizons of the work from an American to a global perspective B la G Lipt k speaks on Post Oil Energy Technology on the AT T Tech Channel

**Radiation Dose from Multidetector CT** Denis Tack, Mannudeep K. Kalra, Pierre Alain Gevenois, 2012-06-05 Computed tomography CT is a powerful technique providing precise and confident diagnoses The burgeoning use of CT has resulted in an exponential increase in collective radiation dose to the population Despite investigations supporting the use of lower radiation doses surveys highlight the lack of proper understanding of CT parameters that affect radiation dose Dynamic advances in CT technology also make it important to

explain the latest dose saving strategies in an easy to comprehend manner This book aims to review all aspects of the radiation dose from CT and to provide simple rules and tricks for radiologists and radiographers that will assist in the appropriate use of CT technique The second edition includes a number of new chapters on the most up to date strategies and technologies for radiation dose reduction while updating the outstanding contents of the first edition Vendor perspectives are included and an online image gallery will also be available to readers

**Remote Sensing Digital Image Analysis** John A. Richards, 2012-12-06 Possibly the greatest change confronting the practitioner and student of remote sensing in the period since the first edition of this text appeared in 1986 has been the enormous improvement in accessibility to image processing technology Falling hardware and software costs combined with an increase in functionality through the development of extremely versatile user interfaces has meant that even the user unskilled in computing now has immediate and ready access to powerful and flexible means for digital image analysis and enhancement An understanding at algorithmic level of the various methods for image processing has become therefore even more important in the past few years to ensure the full capability of digital image processing is utilised This period has also been a busy one in relation to digital data supply Several nations have become satellite data gatherers and providers using both optical and microwave technology Practitioners and researchers are now faced therefore with the need to be able to process imagery from several sensors together with other forms of spatial data This has been driven to an extent by developments in Geographic Information Systems GIS which in turn have led to the appearance of newer image processing procedures as adjuncts to more traditional approaches
