Geometry Mabel Sykes, Clarence Elmer Comstock, 1918 Geometry: The Line and the Circle Maureen T. Carroll, Elyn Rykken, 2018-12-20 Geometry The Line and the Circle is an undergraduate text with a strong narrative that is written at the appropriate level of rigor for an upper level survey or axiomatic course in geometry Starting with Euclid's Elements the book connects topics in Euclidean and non Euclidean geometry in an intentional and meaningful way with historical context The line and the circle are the principal characters driving the narrative In every geometry considered which include spherical hyperbolic and taxicab as well as finite affine and projective geometries these two objects are analyzed and highlighted Along the way the reader contemplates fundamental questions such as What is a straight line What does parallel mean What is distance What is area There is a strong focus on axiomatic structures throughout the text While Euclid is a constant inspiration and the Elements is repeatedly revisited with substantial coverage of Books I II III IV and VI non Euclidean geometries are introduced very early to give the reader perspective on questions of axiomatics Rounding out the thorough coverage of axiomatics are concluding chapters on transformations and constructibility The book is compulsively readable with great attention paid to the historical narrative and hundreds of attractive problems Practical Geometry and Engineering Graphics William Abbott, 1929 **College Geometry with GeoGebra** Barbara E. Reynolds, William E.

Fenton, 2021-01-20 From two authors who embrace technology in the classroom and value the role of collaborative learning comes College Geometry Using GeoGebra a book that is ideal for geometry courses for both mathematics and math education majors The book's discovery based approach guides students to explore geometric worlds through computer based activities enabling students to make observations develop conjectures and write mathematical proofs This unique textbook helps students understand the underlying concepts of geometry while learning to use GeoGebra software constructing various geometric figures and investigating their properties relationships and interactions The text allows students to gradually build

upon their knowledge as they move from fundamental concepts of circle and triangle geometry to more advanced topics such as isometries and matrices symmetry in the plane and hyperbolic and projective geometry Emphasizing active collaborative learning the text contains numerous fully integrated computer lab activities that visualize difficult geometric concepts and facilitate both small group and whole class discussions Each chapter begins with engaging activities that draw students into the subject matter followed by detailed discussions that solidify the student conjectures made in the activities and exercises that test comprehension of the material Written to support students and instructors in active learning classrooms that incorporate computer technology College Geometry with GeoGebra is an ideal resource for geometry courses for both mathematics and math education majors

Geometry by Its Transformations Christopher Baltus, 2025-02-07 This textbook combines the history of synthetic geometry centered on the years 1800 1855 with a theorem proof exposition of the geometry developed in those years The book starts with the background needed from Euclid's Elements followed by chapters on transformations including dilation similitude homology homogeneous coordinates projective geometry inversion the Mbius transformation and transformation geometry as in French schoolbooks of 1910 Projective geometry is presented by tracing its path through the work of J V Poncelet J Steiner and K G C von Staudt Extensive exercises are included many from the period studied The prerequisites for approaching this course are knowledge of high school geometry and enthusiasm for mathematical demonstration This textbook is ideal for a college geometry course for self study or as preparation for the study of modern geometry
