Flatland Edwin Abbott, 2009-11-13 Flatland 1884 is an influential mathematical fantasy that simultaneously provides an introduction to non Euclidean geometry and a satire on the Victorian class structure issues of science and faith and the role of women A classic of early science fiction the novel takes place in a world of two dimensions where all the characters are geometric shapes The narrator A Square is a naive respectable citizen who is faced with proof of the existence of three dimensions when he is visited by a sphere and is forced to see the limitations of his world The introduction to this Broadview Edition provides context for the book's references to Victorian culture and religion mathematical history and the history of philosophy The appendices contain contemporary reviews extracts from the work of fellow mathematical fantasy writer mathematician Charles Hinton Hermann von Helmholtz's *The Axioms of Geometry* 1870 and autobiographical passages from Abbott's *The Kernel and the Husk* 1886 *The Fourth Dimension and Non-Euclidean Geometry in Modern Art, revised edition* Linda Dalrymple Henderson, 2018-05-18 The long awaited new edition of a groundbreaking work on the impact of alternative concepts of space on modern art In this groundbreaking study first published in 1983 and unavailable for over a decade Linda Dalrymple Henderson demonstrates that two concepts of space beyond immediate perception the curved spaces of non Euclidean geometry and most important a higher fourth dimension of space were central to the development of modern art The possibility of a spatial fourth dimension suggested that our world might be merely a shadow or section of a higher dimensional existence That iconoclastic idea encouraged radical innovation by a variety of early twentieth century artists ranging from French Cubists Italian Futurists and Marcel Duchamp to Max Weber Kazimir Malevich and the artists of De Stijl and Surrealism In an extensive new Reintroduction Henderson surveys the impact of interest in higher dimensions of space in art and culture from the 1950s to 2000 Although largely eclipsed by relativity theory beginning in the 1920s the spatial fourth dimension experienced a resurgence during the later 1950s and 1960s In a remarkable turn of events it has returned as an important theme in contemporary culture in the wake of the emergence in the 1980s of both string theory in

physics with its ten or eleven dimensional universes and computer graphics Henderson demonstrates the importance of this new conception of space for figures ranging from Buckminster Fuller Robert Smithson and the Park Place Gallery group in the 1960s to Tony Robbin and digital architect Marcos Novak

The Shape of Space Jeffrey R. Weeks, 2001-12-12 Maintaining the standard of excellence set by the previous edition this textbook covers the basic geometry of two and three dimensional spaces Written by a master expositor leading researcher in the field and MacArthur Fellow it includes experiments to determine the true shape of the universe and contains illustrated examples and engaging exercises that teach mind expanding ideas in an intuitive and informal way Bridging the gap from geometry to the latest work in observational cosmology the book illustrates the connection between geometry and the behavior of the physical universe and explains how radiation remaining from the big bang may reveal the actual shape of the universe

The Mathematical Experience, Study Edition Philip Davis, Reuben Hersh, Elena Anne Marchisotto, 2011-10-27 Winner of the 1983 National Book Award a perfectly marvelous book about the Queen of Sciences from which one will get a real feeling for what mathematicians do and who they are The exposition is clear and full of wit and humor The New Yorker 1983 National Book Award edition Mathematics has been a human activity for thousands of years Yet only a few people from the vast population of users are professional mathematicians who create teach foster and apply it in a variety of situations The authors of this book believe that it should be possible for these professional mathematicians to explain to non professionals what they do what they say they are doing and why the world should support them at it They also believe that mathematics should be taught to non mathematics majors in such a way as to instill an appreciation of the power and beauty of mathematics Many people from around the world have told the authors that they have done precisely that with the first edition and they have encouraged publication of this revised edition complete with exercises for helping students to demonstrate their understanding This edition of the book should find a new generation of general readers and students who would like to know what mathematics is all about It will prove invaluable as a course text for a general mathematics appreciation course one in

which the student can combine an appreciation for the esthetics with some satisfying and revealing applications The text is ideal for 1 a GE course for Liberal Arts students 2 a Capstone course for perspective teachers 3 a writing course for mathematics teachers A wealth of customizable online course materials for the book can be obtained from Elena Anne Marchisotto elena marchisotto csun edu upon request **Strung Together** Sean Miller,2013-03-18 In *Strung Together* The Cultural Currency of String Theory as a Scientific Imaginary Sean Miller examines the cultural currency of string theory both as part of scientific discourse and beyond it He demonstrates that the imaginative component of string theory is both integral and indispensable to it as a scientific discourse While mathematical arguments provide precise prompts for physical intervention in the world the imaginary that supplements mathematical argument within string theory technical discourse allows theorists to imagine themselves interacting with the cosmos as an abstract space in such a way that strings and branes as phenomena become substantiated and legitimized And it is precisely this sort of imaginary which Miller calls a scientific imaginary duly substantiated and acculturated that survives the move from string theory technical discourse to popularizations and ultimately to popular and literary discourses In effect a string theory imaginary legitimizes the science itself and helps to facilitate a virtual domestication of a cosmos that was heretofore remote alien and incomprehensible

Surfing through Hyperspace Clifford A. Pickover,2001-05-17 Do a little armchair time travel rub elbows with a four dimensional intelligent life form or stretch your mind to the furthest corner of an uncharted universe With this astonishing guidebook *Surfing Through Hyperspace* you need not be a mathematician or an astrophysicist to explore the all but unfathomable concepts of hyperspace and higher dimensional geometry No subject in mathematics has intrigued both children and adults as much as the idea of a fourth dimension Philosophers and parapsychologists have meditated on this mysterious space that no one can point to but may be all around us Yet this extra dimension has a very real practical value to mathematicians and physicists who use it every day in their calculations In the tradition of *Flatland* and with an infectious enthusiasm Clifford Pickover tackles the problems inherent in our 3 D brains trying to visualize a 4 D world muses on the religious implications of the existence of higher dimensional consciousness and urges all curious readers to venture into the unexplored territory lying beyond the prison of the obvious Pickover alternates sections that explain the science of hyperspace with sections that dramatize mind expanding concepts through a fictional dialogue between two futuristic FBI agents who dabble in the fourth dimension as a matter of national security This highly accessible and entertaining approach turns an intimidating subject into a scientific game open to all dreamers *Surfing Through Hyperspace* concludes with a number of puzzles computer experiments and formulas for further exploration inviting readers to extend their minds across this inexhaustibly intriguing scientific terrain **Fifth Dimensional Operations** Charles Heal,Robert J. Sibley, 2015-08-14 Thinking Geometrically A Survey of Geometries is a well written and comprehensive survey of college geometry that would serve a wide variety of courses for both mathematics majors and mathematics education majors Great care and attention is spent on developing visual insights and geometric intuition while stressing the logical structure historical development and deep interconnectedness of the ideas Students with less mathematical preparation than upper division mathematics majors can successfully study the topics needed for the preparation of high school teachers There is a multitude of exercises and projects in those chapters developing all aspects of geometric thinking for these students as well as for more advanced students These chapters include Euclidean Geometry Axiomatic Systems and Models Analytic Geometry Transformational Geometry and Symmetry Topics in the other chapters including Non Euclidean Geometry Projective Geometry Finite Geometry Differential Geometry and Discrete Geometry provide a broader view of geometry The different chapters are as independent as possible while the text still manages to highlight the many connections between topics The text is self contained including appendices with the material in Euclid s first book and a high school axiomatic system as well as Hilbert s axioms Appendices give brief summaries of the parts of linear algebra and multivariable calculus needed for certain chapters While some chapters use the language of groups no prior experience with abstract algebra is presumed The text will support an approach emphasizing dynamical geometry software without being tied to any particular software Dimensions of Apeiron Steven M. Rosen, 2004 This book explores the evolution of space and time from the apeiron the spaceless timeless

chaos of primordial nature Rosen examines Western culture's effort to deny apeiron and the critical need now to lift the repression on apeiron for the sake of human individuation This groundbreaking book brings to fruition Rosen's reflexive theory of time and space With recent physics breaking linear time symmetry this unique integration of physics and philosophy is indeed timely Eugene T Gendlin Emeritus Professor of Philosophy and Psychology University of Chicago Rosen's ideas are precisely stated and he draws upon an impressive range of sources both ancient and modern The author shows the inadequacy of conventional thinking about space and time and argues persuasively for an intriguing new alternative This important book may have radical implications for the conduct of science in the 21st century Brian Josephson Cambridge University Professor of Physics Nobel Laureate

Mandalas: Their Nature and Development Bodo Balsek, 2014-10-08 *Mandalas: Their Nature and Development* This book deals with the question of what exactly constitutes a cell metaphysically The cell is viewed as a unit of consciousness that interrelate with other cells to form mandalas of expression Each such cell can be considered a form of self that has a limited though valid body of expression It is born sustains a form of activity and consequently dies when it outlives its usefulness This mode of analysis is extended to include the myriad forms manifest in the world of phenomena known as samsara including the existence and functioning of chakras A Treatise on Mind Outline Volume 1 The Self or Non self in Buddhism Volume 2 Considerations of Mind A Buddhist Enquiry Volume 3 The Buddha Womb and the Way to Liberation Volume 4 Mandalas Their Nature and Development Volume 5 An Esoteric Exposition of the Bardo Thodol Volume 6 Meditation and the Initiation Process Volume 7 The Constitution of Shambhala Whilst the numbers of Buddhists are growing in the world the techniques and discourses of Buddhism have not changed to meet the radically different conditions of the contemporary world Thus Buddhism needs a true restorative flowering to rival that of the renaissance of debate and innovative thinking of the early

post N g rjunian era In order to achieve this it must synthesise the present wealth of scientific knowledge alongside the best of the Western world s philosophical output this is the primary task of this seven volume treatise The treatise investigates Buddhist ideas concerning what mind is and how it relates to a concept of a self It is principally a study of the complex interrelationship between mind and phenomena from the gross to the subtle the physical psychic supersensory and supernal This entails an explanation of how mind incorporates all phenomena in its modus operandi and how eventually that mind is liberated from it thereby becoming awakened Thus the treatise explores the manner in which the corporeally orientated concretised intellectual mind eventually becomes transformed into the Clear Light of the abstracted Mind a Buddha Mind

Is Oedipus Online? Jerry Aline Flieger, 2005-05-06 Psychoanalysis as a navigation device for the cultural maze of the twenty first century Can Freud be updated in the twenty first century or is he a venerated but outmoded genius asks Jerry Aline Flieger In *Is Oedipus Online* Flieger stages an encounter between psychoanalysis and the new century testing the viability of Freud s theories in light of the emergent realities of our time Responding to prominent critics of psychoanalysis and approaching our current preoccupations from a Freudian angle she presents a reading of Freudian theory that coincides with and even clarifies new concepts in science and culture Fractals emergence topological modeling and other nonlinearities for example can be understood in light of both Freud s idea of the symptom as a nodal point and Lacan s concept of networks rather than sequential cause and effect that link psychic realities At the same time Flieger suggests how emerging paradigms in science and culture may elucidate Freud s cultural theory Like Slavoj Zizek editor of the *Short Circuits* series Flieger shifts effortlessly from field to field discussing psychoanalysis millennial culture nonlinear science and the landscape of cyberspace In the first half of the book *Re siting Oedipus* she draws on the work of Lyotard Zizek Deleuze Virilio Baudrillard Haraway and others to refute the assumption of Freud s outdatedness in the new century Then in *Freud Sitings in Millennial Theory* she recasts oedipal theory siting sighting citing Freud in a twenty first century context Thinking of Oedipus decipherer of enigmas wanderer as a navigator or search engine allows us to see psychoanalysis as a navigation device for the cultural maze of the bimillennial era and Oedipus himself as a circuit of intersubjective processes by which we become human For humanity still needed in the posthuman century is at the core of Freud s theory Reading Freud today Flieger writes reminds us of the complications of the Sphinx s riddle the enigma that Oedipus only thought he solved the question of what it is to be human Psychoanalysis continues to pose that question at the crossroads between instincts and their vicissitudes
