Inequality for All William Schmidt, Curtis McKnight, 2015-04-17 Inequality for All makes an important contribution to current debates about economic inequalities and the growing achievement gap particularly in mathematics and science education The authors argue that the greatest source of variation in opportunity to learn is not between local communities or even schools but between classrooms They zero in on one of the core elements of schooling coverage of subject matter content and examine how such opportunities are distributed across the millions of school children in the United States Drawing on data from the third TIMSS international study of curriculum and achievement as well as a six district study of over 500 schools across the United States they point to Common Core State Standards as being a key step in creating a more level playing field for all students William H Schmidt is University Distinguished Professor at Michigan State University and co director of the Education Policy Center Curtis C McKnight is emeritus professor of mathematics at the University of Oklahoma

Variability is the Rule John P. Smith, 2010-12-01 In response to No Child Let Behind states have developed mathematics curriculum frameworks that outline their intended curriculum for grades K 8 While some have indicated that districts or individual schools may use their framework as a model for specific curricular programs others have taken a more prescriptive or even mandatory stance Collectively these frameworks present a sense of the national mathematics program and what we expect students learn This volume follows The Intended Curriculum as Represented in State Mathematics Curriculum Standards Consensus or Confusion Reys While the Reys volume focused on number and

operations algebra and reasoning strands the Smith volume analyzes geometry measurement probability and statistics strands It also presents an analysis what verbs used tell us about the cognitive demand of grade level expectations This volume even more than the Reys volume emphasizes the theme of variability in the content expression and clarity of grade level expectations across the states As the nation moves toward implementation of the Common Core Standards this volume highlights some of the challenges teachers and other school personnel face in interpreting mathematics grade level standards as goals for classroom teaching The shift from 50 state standards to one document does not resolve this basic challenge

Handbook of Research on Innovations in Non-Traditional Educational Practices Keengwe, Jared, 2020-12-11 While many school districts and institutions of higher education still cling to the traditional agrarian school year with a factory model delivery of education and Carnegie units based on seat time when most people are no longer farmers factory workers or reliant on learning in a classroom there are bursts of promising practices that buck the norm by questioning the educational value of these traditions Though researchers have investigated the potential of students learning in their own homes via personalized instruction delivered by computers rather than attending traditional institutions the status quo in education has remained stubbornly resistant to change Mixed reality simulations year round schooling grouping students by competencies instead of age and game based teaching are just a few of the educational innovations that seek to maximize learning by recognizing that innovation is essential for successfully teaching students in the modern era The Handbook of Research on Innovations in Non Traditional Educational Practices is a comprehensive reference source that examines various educational innovations how they have developed workarounds to navigate traditional systems and their potential to radically transform teaching and learning With each chapter highlighting a different educational innovation such as experiential learning game based learning online learning and inquiry based learning and their applications in all levels of education this book explores the issues and challenges these educational innovations face as well as their impact It is intended for academicians professionals administrators and researchers in education and specifically benefits academic deans vice presidents of academic affairs
