**Urban Heat Stress and Mitigation Solutions** Vincenzo Costanzo, Gianpiero Evola, Luigi Marletta, 2021-09-08 This book provides the reader with an understanding of the impact that different morphologies construction materials and green coverage solutions have on the urban microclimate thus affecting the comfort conditions of urban inhabitants and the energy needs of buildings in urban areas The book covers the latest approaches to energy and outdoor comfort measurement and modelling on an urban scale and describes possible measures and strategies to mitigate the effects of the mutual interaction between urban settlements and local microclimate Despite its relevance only limited literature is currently devoted to appraising from an engineering perspective the intertwining relationships between urban geometry and fabrics energy fluxes between buildings and their surroundings outdoor microclimate conditions and building energy demands in urban areas This book fills this gap by first

discussing the physical processes that govern heat and mass transfer at an urban scale while emphasizing the role played by different spatial arrangements manmade materials and green infrastructures on the outdoor microclimate The first chapters also address the implications of these factors on the outdoor comfort conditions experienced by pedestrians and on the buildings energy demand for space heating and cooling Then based upon cutting edge experimental activities and simulation work this book demonstrates current and forthcoming adaptation and mitigation strategies to improve the urban microclimate and its impact on the built environment such as cool materials thermochromic and retroreflective finishing materials and green infrastructures applied either at a building scale or at the urban scale The effect of these solutions is demonstrated for different cities worldwide under a range of climate conditions Finally the book opens a wider perspective by introducing the basic elements that allow fuel poverty raw materials consumption and the principles of circular economy in the definition of a resilient urban settlement

**Advanced GNSS Tropospheric Products for Monitoring Severe Weather Events and Climate** Jonathan Jones,Guergana Guerova,Jan Douša,Galina Dick,Siebren de Haan,Eric Pottiaux,Olivier Bock,Rosa Pacione,Roeland van Malderen,2019-09-16 The book COST Action Final report summarises the proceedings from COST Action ES1206 COST Action ES1206 Advanced GNSS Tropospheric Products for Severe Weather Events and Climate GNSS4SWEC was a 4 year project running from 2013 to 2017 which coordinated new and improved capabilities from concurrent developments in GNSS meteorological and climate communities For the first time the synergy of multi GNSS constellations was used to develop new more advanced tropospheric products exploiting the full potential of multi GNSS on a wide range of temporal and spatial scales from real time products monitoring and forecasting severe weather to the highest quality post processed products suitable for climate research The Action also promoted the use of meteorological data as an input to real time GNSS positioning navigation and timing services and has stimulated knowledge and data transfer throughout Europe and beyond

*Mathematical Methods for Elastic Plates* Christian Constanda,2014-06-24 Mathematical models of deformation of elastic plates are used by applied mathematicians and engineers in connection with a wide range of practical applications from microchip production to the construction of skyscrapers and aircraft This book employs two important analytic techniques to solve the fundamental boundary value problems for the theory of plates with transverse shear deformation which offers a more complete picture of the physical process of bending than Kirchhoff s classical one The first method transfers the ellipticity of the governing system to the boundary leading to singular integral equations on the contour of the domain These equations established on the basis of the properties of suitable layer potentials are then solved in spaces of smooth  $H^1$  and  $H^2$  continuous and  $H^1$  continuously differentiable functions The second technique rewrites the differential system in terms of complex variables and fully integrates it expressing the solution as a combination of complex analytic potentials The last chapter develops a

generalized Fourier series method closely connected with the structure of the system which can be used to compute approximate solutions The numerical results generated as an illustration for the interior Dirichlet problem are accompanied by remarks regarding the efficiency and accuracy of the procedure The presentation of the material is detailed and self contained making Mathematical Methods for Elastic Plates accessible to researchers and graduate students with a basic knowledge of advanced calculus

Intracellular biomineralization in bacteria Damien Faivre, 2014-11-14 Bacteria can sequester metals and other ions intracellularly in various forms ranging from poorly ordered deposits to well ordered mineral crystals Magnetotactic bacteria provide one example of such intracellular deposits They synthesize intracellular magnetic minerals of magnetite  $\text{Fe}_3\text{O}_4$  and or greigite  $\text{Fe}_3\text{S}_4$  magnetosomes which are generally less than 150 nm and organized into one or multiple chain structures The magnetosome chains act like a compass needle to facilitate the navigation of magnetotactic bacteria by using the Earth's magnetic field Due to their ubiquitous distribution in aquatic and sedimentary environments magnetotactic bacteria play important roles in global iron cycling Other intracellular mineral phases have been evidenced in bacteria such as  $\text{As}_2\text{S}_3$   $\text{CaCO}_3$   $\text{CdS}$   $\text{Se}_0$  or various metal phosphates which may play as well a significant role in the geochemical cycle of these elements However in contrast to magnetotactic bacteria the biological and environmental function of these particles remains a matter of debate In recent years such intracellularly biomineralizing bacteria have become an attractive model system for investigating the molecular mechanisms of organelle like structure formation in prokaryotic cells The geological significance of intracellular biomineralization is important spectacular examples are fossil magnetosomes that may significantly contribute to the bulk magnetization of sediments and act as potential archives of paleoenvironmental changes In addition intracellular mineral deposits formed by bacteria have potentially versatile applications in biotechnological and biomedical fields After more than four decades of research the knowledge on intracellularly biomineralizing bacteria has greatly improved The aim of this Research Topic is to highlight recent advances in our understanding of intracellular biomineralization by bacteria Magnetotactic bacteria are a system of choice for that topic but other intracellularly biomineralizing bacteria may bring a unique perspective on that process Research papers reviews perspectives and opinion papers on i the diversity and ecology of intracellularly biomineralizing bacteria ii the molecular mechanisms of intracellular biomineralization iii the chemo and magneto taxis behaviors of magnetotactic bacteria iv the involvement of intracellularly biomineralizing bacteria in local or global biogeochemical cycling v the paleoenvironmental reconstructions and

paleomagnetic signals based on fossil magnetosomes vi and the applications of intracellular minerals in biomaterial and biotechnology were welcomed

analysis this monograph completely solves a problem lying at the interface of Isogeometric Analysis IgA and Finite Element Methods FEM The recent explosion of IgA strongly tying Computer Aided Geometry Design to Analysis does not easily apply to the rich variety of complex shapes that engineers have to design and analyse Therefore new developments have studied the extension of IgA to unstructured unions of meshes similar to those one can find in FEM The following problem arises given an unstructured planar quadrilateral mesh construct a  $C^1$  surface by piecewise Bzier or B Spline patches defined over this mesh This problem is solved for  $C^1$  surfaces defined over plane bilinear Bzier patches the corresponding results for B Splines then being simple consequences The method can be extended to higher order quadrilaterals and even to three dimensions and the most recent developments in this direction are also mentioned here
