Scott Monroe, 1929 Standards-based School Mathematics Curricula Sharon L. Senk, Denisse R. Thompson, 2020-07-24 The  
Curriculum and Evaluation Standards for School Mathematics published by the National Council of Teachers of Mathematics  
in 1989 set forth a broad vision of mathematical content and pedagogy for grades K 12 in the United States These Standards  
prompted the development of Standards based mathematics curricula What features characterize Standards based curricula  
How well do such curricula work To answer these questions the editors invited researchers who had investigated the  
implementation of 12 different Standards based mathematics curricula to describe the effects of these curricula on students  
learning and achievement and to provide evidence for any claims they made In particular authors were asked to identify  
content on which performance of students using Standards based materials differed from that of students using more  
traditional materials and content on which performance of these two groups of students was virtually identical Additionally  
four scholars not involved with the development of any of the materials were invited to write critical commentaries on the  
work reported in the other chapters Section I of Standards Based School Mathematics Curricula provides a historical  
background to place the current curriculum reform efforts in perspective a summary of recent recommendations to reform  
school mathematics and a discussion of issues that arise when conducting research on student outcomes Sections II III and  
IV are devoted to research on mathematics curriculum projects for elementary middle and high schools respectively The final  
section is a commentary by Jeremy Kilpatrick Regents Professor of Mathematics Education at the University of Georgia on  
the research reported in this book It provides a historical perspective on the use of research to guide mathematics  
curriculum reform in schools and makes additional recommendations for further research In addition to the references  
provided at the end of each chapter other references about the Standards based curriculum projects are provided at the end  
of the book This volume is a valuable resource for all participants in discussions about school mathematics curricula

including professors and graduate students interested in mathematics education curriculum development program evaluation or the history of education educational policy makers teachers parents principals and other school administrators The editors hope that the large body of empirical evidence and the thoughtful discussion of educational values found in this book will enable readers to engage in informed civil discourse about the goals and methods of school mathematics curricula and related research
