Geometry Jacques Hadamard, 2008 This is a book in the tradition of Euclidean synthetic geometry written by one of the twentieth century's great mathematicians The original audience was pre college teachers but it is useful as well to gifted high school students and college students in particular to mathematics majors interested in geometry from a more advanced standpoint The text starts where Euclid starts and covers all the basics of plane Euclidean geometry But this text does much more It is at once pleasingly classic and surprisingly modern The problems more than 450 of them are well suited to exploration using the modern tools of dynamic geometry software For this reason the present edition includes a CD of dynamic solutions to select problems created using Texas Instruments TI Nspire Learning Software The TI Nspire documents demonstrate connections among problems and through the free trial software included on the CD will allow the reader to explore and interact with Hadamard's Geometry in new ways The material also includes introductions to several advanced topics The exposition is spare giving only the minimal background needed for a student to explore these topics Much of the value of the book lies in the problems whose solutions open worlds to the engaged reader And so this book is in the Socratic tradition as well as the Euclidean in that it demands of the reader both engagement and interaction A forthcoming companion volume that includes solutions extensions and classroom activities related to the problems can only begin to open

the treasures offered by this work We are just fortunate that one of the greatest mathematical minds of recent times has made this effort to show to readers some of the opportunities that the intellectual tradition of Euclidean geometry has to offer Jacket *Geometry: The Line and the Circle* Maureen T. Carroll, Elyn Rykken, 2018-12-20 *Geometry The Line and the Circle* is an undergraduate text with a strong narrative that is written at the appropriate level of rigor for an upper level survey or axiomatic course in geometry Starting with Euclid's *Elements* the book connects topics in Euclidean and non Euclidean geometry in an intentional and meaningful way with historical context The line and the circle are the principal characters driving the narrative In every geometry considered which include spherical hyperbolic and taxicab as well as finite affine and projective geometries these two objects are analyzed and highlighted Along the way the reader contemplates fundamental questions such as What is a straight line What does parallel mean What is distance What is area There is a strong focus on axiomatic structures throughout the text While Euclid is a constant inspiration and the *Elements* is repeatedly revisited with substantial coverage of Books I II III IV and VI non Euclidean geometries are introduced very early to give the reader perspective on questions of axiomatics Rounding out the thorough coverage of axiomatics are concluding chapters on transformations and constructibility The book is compulsively readable with great attention paid to the historical narrative and hundreds of attractive problems **Targeting Mathematics** □ 6 Pearl Scott, Sheetal Chaudhery, Shanti Dhulia, Lata Thergaonkar, Targeting Mathematics series consists of nine textbooks one for Primer and eight textbooks for classes 1-8 These books have been formulated strictly in accordance with the Continuous and Comprehensive Evaluation CCE approach of Central Board of Secondary Education CBSE and are based on the latest syllabus The series also conforms to the guidelines of National Curriculum Framework 2005 The books have been written by experienced and renowned authors
