

Topic 3

Geomorphology

What you will learn about in this topic

The 'Big Ideas' that have mainly been used as organising principles for this topic are 'spatial processes' and 'human and environment interaction'. In this term you will learn about the following issues relating to geomorphology:

- Landforms associated with horizontal strata
- Landforms associated with inclined strata
- Landforms associated with massive igneous rocks
- The physical topography of South Africa
- Slopes and slope forms
- Mass movement and human responses to these processes.

Let's talk about this topic

This topic builds on your knowledge of geomorphology. The landforms that exist on the Earth have been formed by various geomorphological processes. Each of these landforms has a unique shape and characteristic. They are made up of different rock structures and create different shaped landscapes and scenery. Their structure determines how people use them. The Blyde River Canyon shown here has been formed by the erosion of rock layers. It is one of the most popular tourist attractions found in the province of Limpopo. Consider the following when studying this photo: How did this canyon form? What type of rock layers are found here? How did these rock layers form? How old are these rock layers? How does such a landform affect human activities? Why do you think it is a popular tourist feature?
