5.301. Students will investigate the physical attributes of rocks and soils.

- Explain the difference between a rock and a mineral.
- Recognize the physical attributes of rocks and minerals using observation, measurement, and simple tests.
- Use observation to compare the similarities and differences of texture, particle size, and color in top soils (such as clay, loam, and sand).
- Determine how water and wind can change rocks and soil over time using observation and research.

A mineral is an object that is solid, formed in nature, and has never been alive.

Rocks are made from different minerals. There are three types of rocks: Igneous, Sedimentary, and Metamorphic.

Igneous rocks are formed from lava or melted rock that cooled and hardened into rock.

Sedimentary rocks are formed when sand, pebbles, leaves, clay, animal remains, or other material settle into layers. These layers are pressed together under the ground and after many years, a sedimentary rock forms.

Metamorphic rocks are rocks that have changed form because of intense heat and pressure. For example, limestone, a sedimentary rock, can become marble when heat and pressure are added.

Rocks can change into other types of rock. The process of changing is called the rock cycle.

There are about 3,000 different types of minerals. We identify minerals by their properties.

Some properties of minerals are hardness, texture, color, and luster. Some common minerals are quartz, talc, and sulfur. Minerals have different uses. Halite is used to make salt, talc is used in powder, and sulfur is used in medicine. Other minerals are used to make jewelry.

Streak test for color

There are two tests students can do to identify a mineral.

A streak test is when a mineral is rubbed across a white tile. The color of the streak may help identify the mineral.

Science, Grade 3 Crct Practice Tests Hsp, 2006-10-01 *3rd Grade Georgia Milestone Test Prep* Mark Shannon, 2018-01-18 This test prep is good for kids who are on the fence and having trouble passing or need to increase their margin These kids will often say I DON'T KNOW WHERE TO START when explaining their confusion This book address that problem with three approaches 1 In contrast with the other study guides that use random questions in their practice exams this book collated the questions into chapters based on the logic to solve them The 3rd grade book is divided into seven chapters They are Logic Arithmetic Geometry Fractions Reading Graphs and tables Measurements including a ruler and basic statistics or odds of occurrence This book teaches basics then goes into practice exams with word problems Once the student is proficient with the questions organized into chapters then they are ready for random questions 2 This study guide has thousands of practice problems I have placed over 3100 videos on YouTube showing you how to work the problems 3 I reviewed several years of past exams and placed enfaces on the easiest

and most common questions Mastering these questions should yield a 75% to 80% If a student is already achieving this percentage the other guides or web site with random questions and covering all material might be best A book might be better for your student than the web sites for two reasons 1 The more common and easiest questions are using a ruler to measure The web designers don t know the size of your computer screen and can t determine if the student has measured correctly We can get a high percentage of these problems easily 2 When studying on a computer there are too many websites with the answers With a book parents can have greater assurance the work is being done This book is developed by a trained professional out of concern It is not the product of a large publishing house It is the results of one person who wants to help
