**In Vitro and In Vivo Hemolysis** Giuseppe Lippi,Gianfranco Cervellin,Emmanuel J. Favaloro,Mario Plebani,2012-07-30 Defined as red blood cell break down and the release of

hemoglobin and intracellular contents into the plasma hemolysis can seriously impact patient care as well as the laboratory's reputation through its effect on test results. Therefore, the European Preanalytical Scientific Committee in collaboration with the International Federation of Clinical Chemistry Working Group on Patient Safety have designed a questionnaire to collect data on prevalence and management of hemolytic specimens referred to the clinical laboratories for clinical chemistry testing. This book will help identify the areas where hemolysis occurs most frequently which can in turn guide further analysis about why it is occurring. Once these elements are known, practices and procedures can be implemented to dramatically reduce hemolysis and avoid erroneous laboratory results affecting patient care and increasing laboratory costs. **Official Gazette**
