Methane Biocatalysis: Paving the Way to Sustainability Marina G. Kalyuzhnaya, Xin-Hui Xing, 2018-06-20 This book provides in depth insights into the most recent developments in different areas of microbial methane and methanol utilization including novel fundamental discoveries in genomics and physiology innovative strategies for metabolic engineering and new synthetic approaches for generation of feedstocks chemicals and fuels from methane and finally economics and the implementation of industrial biocatalysis using methane consuming bacteria Methane as natural gas or biogas penetrates every area of human activity from households to large industries and is often promoted as the cleanest fuel However one should not forget that this bundle of energy carbon and hydrogen comes with an exceptionally large environmental footprint To meet goals of long term sustainability and human well being all areas of energy chemicals agriculture waste management industries must go beyond short term economic considerations and target both large and small methane emissions The search for new environment friendly approaches for methane capture and valorization is an ongoing journey While it is not yet apparent which innovation might represent the best solution it is evident that methane biocatalysis is one of the most promising paths Microbes are gatekeepers of fugitive methane in Nature Methane consuming microbes are typically small in number but exceptionally big in their impact on the natural carbon cycle They control and often completely eliminate methane emission from a variety of biological and geothermal sources The tremendous potential of these microbial systems is

only now being implemented in human made systems The book addresses professors researchers and graduate students from both academia and industry working in microbial biotechnology molecular biology and chemical engineering

Designing the Microbial Research Commons National Research Council, Policy and Global Affairs, Board on Research Data and Information, 2010-10-30 Recent decades have witnessed an ever increasing range and volume of digital data All elements of the pillars of science whether observation experiment or theory and modeling are being transformed by the continuous cycle of generation dissemination and use of factual information This is even more so in terms of the re using and re purposing of digital scientific data beyond the original intent of the data collectors often with dramatic results We all know about the potential benefits and impacts of digital data but we are also aware of the barriers the challenges in maximizing the access and use of such data There is thus a need to think about how a data infrastructure can enhance capabilities for finding using and integrating information to accelerate discovery and innovation How can we best implement an accessible interoperable digital environment so that the data can be repeatedly used by a wide variety of users in different settings and with different applications With this objective to use the microbial communities and microbial data literature and the research materials themselves as a test case the Board on Research Data and Information held an International Symposium on Designing the Microbial Research Commons at the National Academy of Sciences in Washington DC on 8-9 October 2009 The symposium addressed topics such as models to lower the transaction costs and support access to and use of microbiological materials and digital resources from the perspective of publicly funded research public private interactions and developing country concerns The overall goal of the symposium was to stimulate more research and implementation of improved legal and institutional models for publicly funded research in microbiology
