

WRITING SCIENTIFIC RESEARCH PAPERS

I. What is a Research Paper?

There are two kinds of research papers. Primary or experimental research papers describe an experiment performed by the author. (I mean "experiment" in the broadest sense, as in a scientific investigation. The investigation may employ a rigorously controlled lab experiment, a controlled field experiment, a theoretical/mathematical investigation, or simply some new scientific observations. The key is that the body of the paper is about a novel investigation conducted by the author.) Secondary or review research papers summarize the research that has been done in a particular area. Reviews generally do not introduce much new information or new results, but rather synthesize a larger body of work, providing a new perspective on a field or question. In this class, you will be required to write a scientific review paper.

A secondary research paper or review paper is not a 'book report' or an annotated list of experiments in a particular field, but demands a considerable, complete literature review. However, beyond just reporting the results and conclusions of other studies, the review must integrate, interpret and expand these conclusions. Often, articles must be read over and over again to really understand the subtle relevance of a particular result or conclusion. Then, the independent conclusions of separate investigations must be combined into a cohesive presentation. They must be contrasted and compared; are there conflicting conclusions? Can apparent conflicts be resolved through a new outlook or interpretation? Review papers often take historical perspectives, describing how a field (and the major questions in that field) changed as more information was accumulated. Or, review papers may focus on 'the state of the art' in a particular field; interpreting divergent results and suggesting an appropriate avenue for future research.

Who writes review articles? Usually, it is the experts in a particular field. They have the experience and knowledge to critically evaluate experiments and organize them in a new provocative way; perhaps incorporating them into a new, unifying theory. Good review papers are not easy to write; if they were, more scientists would write them. By writing your review paper, I expect you to become a 'departmental expert' on a topic, able to 'wow' your fellow AP biology students with your new knowledge about your field. I do expect to see a creative synthesis of the literature, rather than a jumbled regurgitation of facts.

How to Write and Publish a Scientific Paper Robert A Day, Barbara Gastel, 2006-04-26 Guide on writing and submitting a scientific paper for graduates to professionals **How to Write and Publish a Scientific Paper** Barbara Gastel, Robert A. Day, 2022-06-30 Thoroughly updated throughout this classic practical text on how to write and publish a scientific paper takes its own advice to be as clear and simple as possible The purpose of scientific writing according to Barbara Gastel and Robert A Day is to communicate new scientific findings Science is simply too important to be communicated in anything other than words of certain meaning This clear beautifully written and often funny text is a must have for anyone who needs to communicate scientific information whether they re writing for a professor other scientists or the general public The thoughtfully revised 9th edition retains the most important material including preparing text and graphics publishing papers and other types of writing and plenty of information on writing style while adding up to date advice on copyright presenting online identifying authors creating visual abstracts and writing in English as a non native language A set of valuable appendixes provide ready reference including words and expressions to avoid SI prefixes a list of helpful websites and a glossary Students and working scientists will want to keep *How to Write and Publish a Scientific Paper* at their desks and refer to it at every stage of writing and publication *How to Write and Publish a Scientific Research Paper* Sophie Domingues-Montanari, 2011 *How to Conduct an Effective Peer Review* Gloria Barczak, Abbie Griffin, 2021-01-29 This crucial book guides academics and researchers through the process of peer reviewing manuscript articles outlining the methods and proficiencies required to write a high quality review Gloria Barczak and Abbie Griffin specifically highlight the importance of becoming a first rate reviewer to early career scholars *Systematic Approaches to a Successful Literature Review* Andrew Booth, Diana Papaioannou, Anthea Sutton, 2011-12-16 Reviewing the literature is an essential part of every research project This book takes you step by step through the process of approaching your literature review systematically applying systematic principles to a wide range of literature review types Through numerous examples case studies and exercises the book covers often neglected areas of literature review such as concept analysis scoping and mapping The book includes practical tools for supporting the various stages of the review process including managing your literature review searching the literature assessing the quality of the literature synthesising qualitative and or quantitative data writing up and presenting data *Systematic Approaches to a Successful Literature Review* is essential reading for any student or researcher looking to approach their literature review in a systematic way *How to Use Storytelling in Your Academic Writing* Timothy G Pollock, 2025-02-12 Good writing skills and habits are critical for scholarly success Every article is a story and employing effective storytelling techniques enhances scholars abilities to share their insights and ideas increasing the impact of their research **Beyond open access: visions for open evaluation of scientific papers by post-publication peer review** Nikolaus Kriegeskorte, Diana Deca, A scientific publication system needs to provide two basic services access and

evaluation The traditional publication system restricts the access to papers by requiring payment and it restricts the evaluation of papers by relying on just 2-4 pre-publication peer reviews and by keeping the reviews secret As a result the current system suffers from a lack of quality and transparency of the peer review evaluation process and the only immediately available indication of a new paper's quality is the prestige of the journal it appeared in Open access is now widely accepted as desirable and is slowly beginning to become a reality However the second essential element evaluation has received less attention Open evaluation an ongoing post-publication process of transparent peer review and rating of papers promises to address the problems of the current system However it is unclear how exactly such a system should be designed The evaluation system steers the attention of the scientific community and thus the very course of science For better or worse the most visible papers determine the direction of each field and guide funding and public policy decisions Evaluation therefore is at the heart of the entire endeavor of science As the number of scientific publications explodes evaluation and selection will only gain importance A grand challenge of our time therefore is to design the future system by which we evaluate papers and decide which ones deserve broad attention So far scientists have left the design of the evaluation process to journals and publishing companies However the steering mechanism of science should be designed by scientists The cognitive computational and brain sciences are best prepared to take on this task which will involve social and psychological considerations software design and modeling of the network of scientific papers and their interrelationships This Research Topic in Frontiers in Computational Neuroscience collects visions for a future system of open evaluation Because critical arguments about the current system abound these papers will focus on constructive ideas and comprehensive designs for open evaluation systems Design decisions include Should the reviews and ratings be entirely transparent or should some aspects be kept secret Should other information such as paper downloads be included in the evaluation How can scientific objectivity be strengthened and political motivations weakened in the future system Should the system include signed and authenticated reviews and ratings Should the evaluation be an ongoing process such that promising papers are more deeply evaluated How can we bring science and statistics to the evaluation process e.g. should rating averages come with error bars How should the evaluative information about each paper e.g. peer ratings be combined to prioritize the literature Should different individuals and organizations be able to define their own evaluation formulae e.g. weighting ratings according to different criteria How can we efficiently transition toward the future system Ideally the future system will derive its authority from a scientific literature on community-based open evaluation We hope that these papers will provide a starting point

[The A-Z of the PhD Trajectory](#) Eva O. L. Lantsoght, 2018-05-25 This textbook is a guide to success during the PhD trajectory The first part of this book takes the reader through all steps of the PhD trajectory and the second part contains a unique glossary of terms and explanation relevant for PhD candidates Written in the accessible language of the PhD Talk blogs the book contains a great deal of practical advice for carrying out research and presenting

one's work. It includes tips and advice from current and former PhD candidates thus representing a broad range of opinions. The book includes exercises that help PhD candidates get their work kick started. It covers all steps of a doctoral journey in STEM: getting started in a program, planning the work, the literature review, the research question, experimental work, writing, presenting, online tools, presenting at one's first conference, writing the first journal paper, writing and defending the thesis, and the career after the PhD. Since a PhD trajectory is a deeply personal journey, this book suggests methods PhD candidates can try out and teaches them how to figure out for themselves which proposed methods work for them and how to find their own way of doing things.

A Survival Guide for Research Scientists Ratna Tantra, 2019-08-31. Research scientists play a pivotal role in society. Their passion for science will drive them forward, leading to new discoveries that will ultimately make the world a better place. Unfortunately, as the professional environment becomes more and more competitive, research scientists today cannot just rely on technical knowledge to carve successful careers. Besides technical skills, they will need to acquire other skills such as how to communicate their science to the outside world. *A Survival Guide for Research Scientists* is a one-stop shop that will help you to develop those core skills not often taught at school or university. The book has been written by an author with more than 20 years of scientific research experience across different scientific disciplines. She has not only been a research scientist but also a writer, a consultant, a sole trader, and a project manager. *A Survival Guide for Research Scientists* takes on a holistic approach in order to help you pave the way for success. As such, it features practical guidelines on how to conduct your scientific research, how to do literature review, design experiments, adopt best practice, ensure health and safety, etc., write and edit reports, bid proposals, peer review publications, etc., interact with the outside world, be a team leader, manage a project, network, deal with difficult people, do presentations, organise meetings, etc., look after your career and get your dream job, look after yourself and how to manage stress, look for a job, develop your CV, prepare for interviews, etc., become self-employed and achieve business success, deal with redundancy and move forward in life, etc. Whatever your scientific background may be, this book is the perfect accompaniment to guide you at every stage of your career.
