species with the aim of demonstrating how various life history characteristics of the species are incorporated into the model and how the results of the model has been or can be used in conservation and management of the species The book comes with a CD that includes a demo version of the program and the data files for each species *Video Content Analysis Using Multimodal Information* Ying Li,C.C. Jay Kuo,2013-04-17 Video Content Analysis Using Multimodal Information For Movie Content Extraction Indexing and Representation is on content based multimedia analysis indexing representation and applications with a focus on feature films Presented are the state of art techniques in video content analysis domain as well as many novel ideas and algorithms for movie content analysis based on the use of multimodal information The authors employ multiple media cues such as audio visual and face information to bridge the gap between low level audiovisual features and high level video semantics Based on sophisticated audio and visual content processing such as video segmentation and audio classification the original video is re represented in the form of a set of semantic video scenes or events where an event is further classified as a 2 speaker dialog a multiple speaker dialog or a hybrid event Moreover desired speakers are simultaneously identified from the video stream based on either a supervised or an adaptive speaker identification scheme All this information is then integrated together to build the video s ToC table of content as well as the index table Finally a video abstraction system which can generate either a scene based summary or an event based skim is presented by exploiting the knowledge of both video semantics and video production rules This monograph will be of great interest to research scientists and graduate level students working in the area of content based multimedia analysis indexing representation and applications as well s its related fields Symbolic Computation for Statistical Inference David F. Andrews,James E. H. Stafford,2000 Over recent years developments in statistical computing have freed statisticians from the burden of calculation and have made possible new methods of analysis that previously would have been too difficult or time consuming Up till now these developments have been primarily in numerical computation and graphical display but equal steps forward are now being made in the area of symbolic computing or in other words the use of computer languages and procedures to manipulate expressions This allows researchers to compute an algebraic expression rather than evaluate the expression numerically over a given range This book summarizes a decade of research into the use of symbolic computation applied to statistical inference problems It shows the considerable potential of the subject to automate statistical calculation leaving researchers free to concentrate on new concepts Starting with the development of algorithms applied to standard undergraduate problems the book then goes on to develop increasingly more powerful tools Later chapters then discuss the application of these algorithms to different areas of statistical methodology **Schizophrenia Bulletin** ,2003 Ethereal Users Guide Richard Sharpe,Ed Warnicke,2001 Ethereal is one of those packages that many network managers would love to be able to use but they are often prevented from getting what they would like from Ethereal because of the lack of documentation This document is part of an effort on the part of the Ethereal team to improve the accessibility of Ethereal We
