Speed Breeding Systems For Food Kenny Paul, Nagesh Kancharla, Kshipra Gautam, Marina Ceran, 2024-10-17 Speed breeding systems for sustainable food production offer a promising solution to address food security and environmental sustainability. Speed breeding technologies allow accelerating generation of new plant varieties with desired traits in a short period. These systems include genetic selection, vertical hydroponics, and data-driven smart sensor applications. Quick generation of plant varieties is achieved by manipulating photoperiods of a native plant with extended light periods in a controlled environment to fasten the crop cycle. This allows for multiple plant generations to be grown and harvested in a single year rather than the typical one to two generations in traditional field-based breeding. The application of molecular markers in the analysis of crop genomes enables the identification and characterization of genetic variation within a crop species. This in turn helps breeders in identifying and selecting plants with desirable traits such as resistance to pests or diseases or improved yield. Marker-assisted selection (MAS) and genomic selection (GS) are two recent methods that revolutionized plant breeding to improve the efficiency and accuracy of selecting desirable traits. MAS allows breeders to identify desirable traits earlier in the breeding process without having to wait for the traits to be phenotypically expressed. On the other hand, GS allows breeders to predict the performance of a plant before it is even grown and can help speed up the breeding process by allowing breeders to select plants with desirable traits much earlier in the breeding process. *The Essential Guide to Fitness* Rosemary Marchese, Julie Taylor, Kirsten Fagan, 2019-04-30 *Essential Guide to Fitness for the Fitness Instructor* addresses SIS30315 Certificate III in Fitness. The text is mapped to all core units and 12 electives of the qualification and contains rich foundation content on Anatomy, Physiology, and Nutrition as well as Fitness orientation, programming, WHS, and equipment. The structure of the text highlights learning outcomes and contains an abundance of application cases, activities, and quizzes. Strong content on fitness for specific markets and populations supports the volume of learning for the core unit. Recognise and apply exercise considerations for specific populations including chapters on older populations, a NEW chapter on children and adolescents, community fitness, and facilitating groups. Coverage on gym programs, group exercise, water-based fitness, and endurance training introduces students to the instruction of these varied types of fitness training.
