funções

(a) $f(x) = \ln(x^2 + 1) - \ln(x^2 - 1)$

$$f'(x) = \frac{2x}{x^2 + 1} - \frac{2x}{x^2 - 1} = \frac{2x(x^2 - 1) - 2x(x^2 + 1)}{(x^2 + 1)(x^2 - 1)} = \frac{2x(x^2 - 1 - x^2 - 1)}{(x^2 + 1)(x^2 - 1)} = \frac{-4x}{x^4 - 1}$$

(b) $f(x) = \ln(x^2 + 1) - \ln(x^2 - 1)$

$$f'(x) = \frac{2x}{x^2 + 1} - \frac{2x}{x^2 - 1} = \frac{2x(x^2 - 1) - 2x(x^2 + 1)}{(x^2 + 1)(x^2 - 1)} = \frac{-4x}{x^4 - 1}$$

(c) $f(x) = \ln(x^2 + 1) - \ln(x^2 - 1)$

$$f'(x) = \frac{2x}{x^2 + 1} - \frac{2x}{x^2 - 1} = \frac{2x(x^2 - 1) - 2x(x^2 + 1)}{(x^2 + 1)(x^2 - 1)} = \frac{-4x}{x^4 - 1}$$

(d) $f(x) = \ln(x^2 + 1) - \ln(x^2 - 1)$

$$f'(x) = \frac{2x}{x^2 + 1} - \frac{2x}{x^2 - 1} = \frac{2x(x^2 - 1) - 2x(x^2 + 1)}{(x^2 + 1)(x^2 - 1)} = \frac{-4x}{x^4 - 1}$$

(e) $f(x) = \ln(x^2 + 1) - \ln(x^2 - 1)$

$$f'(x) = \frac{2x}{x^2 + 1} - \frac{2x}{x^2 - 1} = \frac{2x(x^2 - 1) - 2x(x^2 + 1)}{(x^2 + 1)(x^2 - 1)} = \frac{-4x}{x^4 - 1}$$

Infinite Algebra 1 Dividing Polynomials:

A Concrete Introduction to Higher Algebra Lindsay N. Childs, 2012-12-04 This book is written as an introduction to higher algebra for students with a background of a year of calculus The first edition of this book emerged from a set of notes written in the 1970s for a sophomore/junior level course at the University at Albany entitled Classical Algebra The objective of the course and the book is to give students enough experience in the algebraic theory of the integers and polynomials to appreciate the basic concepts of abstract algebra The main theoretical thread is to develop algebraic properties of the ring of integers unique factorization into primes congruences and congruence classes Fermat's theorem the Chinese remainder theorem and then again for the ring of polynomials Doing so leads to the study of simple field extensions and in particular to an exposition of finite fields Elementary properties of rings fields groups and homomorphisms of these objects are introduced and used as needed in the development Concurrently with the theoretical development the book presents a broad variety of applications to cryptography error correcting codes Latin squares tournaments techniques of integration and especially to elementary and computational number theory A student who asks Why am I learning this will find answers usually within a chapter or two For a first course in algebra the book offers a couple of advantages By building the algebra out of numbers and polynomials the book takes maximal advantage of the student's prior experience in algebra and arithmetic New concepts arise in a familiar context Prentice Hall Algebra 1 Jan Fair, 1992 *Algebra* I. Martin Isaacs, 2009 as a student Book Jacket *Algebra and Trigonometry* Sheldon Axler, 2011-03-08 Axler Algebra an innovative research based online environment for effective teaching and learning WileyPLUS sold separately from text **Computer Algebra and Symbolic Computation** Joel S. Cohen, 2003-01-03 Mathematica Maple and similar software packages provide programs that carry out sophisticated mathematical operations Applying the ideas introduced in Computer Algebra and Symbolic Computation Elementary Algorithms this book explores the application of algorithms to such methods as automatic simplification polynomial decomposition and polynomials **Discourses on Algebra** Igor R. Shafarevich, 2012-12-06 I wish that algebra would be the Cinderella of our story In the mathematics program in schools geometry has often been the favorite daughter The amount of geometric knowledge studied in schools is approximately equal to the level achieved in ancient Greece and summarized by Euclid in his Elements third century B.C For a long time geometry was taught according to Euclid simplified variants have recently appeared In spite of all the changes introduced in geometry courses geometry retains the influence of Euclid and the inclination of the grandiose scientific revolution that occurred in Greece More than once I have met a person who said I didn't choose math as my profession but I'll never forget the beauty of the elegant edifice built in geometry with its strict deduction of more and more complicated propositions all beginning from the very simplest most obvious statements Unfortunately I have never heard a similar assessment concerning algebra Algebra courses in schools comprise a strange mixture of useful rules logical judgments and exercises in using aids such as tables of logarithms and pocket calculators

Such a course is closer in spirit to the brand of mathematics developed in ancient Egypt and Babylon than to the line of development that appeared in ancient Greece and then continued from the Renaissance in western Europe. Nevertheless algebra is just as fundamental, just as deep and just as beautiful as geometry. [egghead's Guide to Calculus](#) Cara Cantarella, 2015-09-22 The fourth book in Peterson's NEW series of guides for visual learners, this volume covers basic calculus topics that are essential for success on high school and college calculus tests. Topics include limits, continuity, derivatives, their applications, and integrals. Students who need help with the basics will find that egghead's Guide to Calculus offers just what they need to be able to improve their understanding of the fundamentals of calculus necessary for success in high school and college courses. The eBook includes a review of algebra and trigonometry required in preparation for understanding calculus, expert tutorial explanations, dozens of sample exercises and solutions with helpful tips and strategies, and easy-to-follow lessons with fun graphics that provide essential information to help those who learn visually. [Algebra Interactive!](#) Arjeh M. Cohen, Hans Cuypers, Hans Sterk, 1999-08-25 The first interactive course covering first and second year algebra. Starting from such fundamental topics as integers and divisions, modular arithmetic, and polynomials, the content extends to rings, fields, and permutation groups. The hypertext is written in Java-enhanced HTML, and Java applets illustrate the theory while also contributing interactive calculators for computing with integers, polynomials, and permutations. The computer algebra system GAP is integrated throughout, allowing the calculation and manipulation of mathematical objects. In addition, collections for Mathematica notebooks and Maple worksheets review the algorithms presented. Multiple choice exercises provide users with instant feedback, while facilities for monitoring students and a bulletin board complete this digital course. **Integers, Polynomials, and Rings** Ronald S. Irving, 2004-01-08 This book began life as a set of notes that I developed for a course at the University of Washington entitled Introduction to Modern Algebra for Teachers. Originally conceived as a text for future secondary school mathematics teachers, it has developed into a book that could serve well as a text in an undergraduate course in abstract algebra or a course designed as an introduction to higher mathematics. This book differs from many undergraduate algebra texts in fundamental ways; the reasons lie in the book's origin and the goals I set for the course. The course is a two-quarter sequence required of students intending to fulfill the requirements of the teacher preparation option for our B.A. degree in mathematics or of the teacher preparation minor. It is required as well of those intending to matriculate in our university's Master's in Teaching program for secondary mathematics teachers. This is the principal course they take involving abstraction and proof, and they come to it with perhaps as little background as a year of calculus and a quarter of linear algebra. The mathematical ability of the students varies widely, as does their level of mathematical interest. **Geometry of Moduli Spaces and Representation Theory** Roman Bezrukavnikov, Alexander Braverman, Zhiwei Yun, 2017-12-15 This book is based on lectures given at the Graduate Summer School of the 2015 Park City Mathematics Institute program. Geometry of moduli spaces and representation theory and is devoted to several

interrelated topics in algebraic geometry topology of algebraic varieties and representation theory Geometric representation theory is a young but fast developing research area at the intersection of these subjects An early profound achievement was the famous conjecture by Kazhdan Lusztig about characters of highest weight modules over a complex semi simple Lie algebra and its subsequent proof by Beilinson Bernstein and Brylinski Kashiwara Two remarkable features of this proof have inspired much of subsequent development intricate algebraic data turned out to be encoded in topological invariants of singular geometric spaces while proving this fact required deep general theorems from algebraic geometry Another focus of the program was enumerative algebraic geometry Recent progress showed the role of Lie theoretic structures in problems such as calculation of quantum cohomology K theory etc Although the motivation and technical background of these constructions is quite different from that of geometric Langlands duality both theories deal with topological invariants of moduli spaces of maps from a target of complex dimension one Thus they are at least heuristically related while several recent works indicate possible strong technical connections The main goal of this collection of notes is to provide young researchers and experts alike with an introduction to these areas of active research and promote interaction between the two related directions
